Food and Nutrition for Athletics: Redefining the Role and Application Xiao Li Shen, Baoming Tian, 2025-04-28

Food and nutrition play crucial roles in athletic performance and overall health. Traditionally, the focus has been on providing athletes with adequate energy and nutrients to support training and competition demands. However, recent advancements in sports science and nutrition research have led to a re-evaluation of the role and application of food and nutrition in athletics. This includes exploring innovative dietary strategies to optimize performance, enhance recovery, and mitigate the risk of injury and illness. Additionally, there is growing recognition of the individualized nature of nutrition requirements among athletes, considering factors such as training load, metabolic demands, and genetic predispositions. As such, redefining the role and application of food and nutrition in athletics is essential for maximizing the potential of athletes and promoting long-term health and well-being.

Food Science Edelstein, 2018-01-16 The science of food is discussed within the broader context of the world's food supply. **Food Science: An Ecological Approach** explores the idea of global sustainability and examines the ecological problems that challenge our food supply and raise increasing concerns among consumers.

Food Science: An Ecological Approach Sari Edelstein, 2018-01-16 Food Science: An Ecological Approach presents the field of food science, the study of the physical, biological, and chemical makeup of food and the concepts underlying food processing in a fresh, approachable manner that places it in the context of the world in which we live today.

South Africa's Post-Apartheid Military Lindy Heineken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security, political, and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented, and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed, and the implications for force procurement, force preparation, force employment, and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention of military veterans, looking at the difficulties they face in reintegrating back into society, and finding gainful employment, gender equality, and mainstreaming the rise of military unions, and why a confrontational instead of a more corporatist approach to labour relations has emerged. HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence, security, and civil-military relations of countries around the world.

C. Muelbert,2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e g fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how

dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after

Advancing the Science of Environmental Justice in the International Wildlife Trade Jamie K. Reaser, Nicholas King, Gunārs Hauff Platais, Ines Arroyo-Quiroz, Meredith L. Gore, Isla Kirkey, 2025-06-03 The Smithsonian Institution has offered to cover the publication costs of most if not all of the papers accepted for this Research Topic There is a need to conceptualize an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities nations species and ecological systems entwined in the commerce pathway This Research Topic is dedicated to advancing the science of environmental justice in the international wildlife trade from both problems and solutions perspectives We welcome manuscripts relevant to legal and or illegal aspects of the international wildlife trade Submissions must be of a scholarly nature and framed from a social sciences perspective although inter disciplinary work is encouraged The international wildlife trade has been recognized as one of the greatest threats to biodiversity as well as a facilitator of zoonotic disease transmission with pandemic potential This has led to increased calls for regulation of this megabillion year industry ranging from comprehensive bans to risk based strategies that are species product and or geography specific Every aspect of wildlife commerce and every proposed risk mitigation measure has implications for environmental justice yet environmental justice has not been mainstreamed in the scientific inquiry policy nor planning processes relative to the international wildlife trade Because wildlife trade has diverse drivers and purposes as well as different levels of legality social legitimacy and enforcement there is an urgent need to understand the environmental justice issues tied to consumer

demand vs supply provision along the trade chain including how this is influenced by economic cultural and geographic biases An understanding of environmental justice patterns and trends is necessary for the design and support of effective regulatory frameworks that manage risks in actuality rather than merely in concept Determining where and how to permit and support legal and sustainable wildlife trade versus where it should be more tightly regulated or even cease requires at least as much understanding of the human animal as it does the wildlife species A greater understanding of the political economy of the illegal aspects of the international wildlife trade from an environmental justice perspective can also open new vistas of green criminological inquiry Ecological citizenship and environmental justice are central themes in green criminology highly relevant to the wildlife trade They recognize justice as central to the right to be protected from harm whether that is one on one harm institutionalized harm or harm arising from human actions that affect climates and environments on a global scale The recognition of such rights in trade regulation is scant and more likely overshadowed by a desire to protect the economic value of a good rather than the inherent value of the wild animal being consumed We will prioritize papers that use social science approaches tools to empirically investigate aspects of environmental justice in the international wildlife trade Manuscripts should be framed so as to facilitate development of an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities nations and ecological systems entwined in the commerce pathway We welcome manuscripts relevant to legal and or illegal aspects of the international wildlife trade Submissions must be of a scholarly nature we will not accept advocacy documents The following manuscript types will also be considered if the contributions are sufficiently innovative transformative 1 Case studies of environmental justice problems resolutions in the international wildlife trade context 2 Models for advancing the science of environmental justice in the international wildlife trade context 3 Analyses of international wildlife trade law policy frameworks with a view toward integrating environmental justice issues as rooted in scholarly science All papers should emphasize conservation goals outcomes Direct inquiries about other manuscript themes types to Dr Jamie K Reaser at Reaserjk@si.edu This Research Topic was developed in collaboration with the IUCN Commission on Education and Communication <https://www.iucn.org/our-union/commissions/commission-education-and-communication> and the International Alliance Against Health Risks in the Wildlife Trade <https://alliance.health.wildlife.org>
