

6. DeClutch

When machine is running with first forward or reverse on, and the operator presses de-clutch button, gear is shifted down to neutral and kept in neutral as long this button is pressed. When the button is released previous gear is set on again. De-clutch function is possible only with first forward or first reverse. (Normally works with first gear only but can be set with parameters).

When machine is running forward with first gear, operator can press the de-clutch button, keep it pressed and reverse (R) button, now machine starts running backwards when de-clutch button is released. This function is using opposite way if machine is running first backwards and R button is pressed instead of (F).

7. First gear only

In auto gear mode, press button at any time on forward approach to the angle. On downshift to 1st gear, transmission is held in first gear for the full dig process, machine cannot up-shift, and display shows first gear only is available. Selecting reverse gear releases this function.

Bucket Control Lever

The Bucket control lever is on the right side of the operator. The bucket control lever is used to raise and lower the lift arms and to dump and roll back the bucket.

- To raise the lift arms - move the lever to the right
- To lower the lift arms - move the lever to the left
- To dump the bucket - move the lever forward
- To roll back the bucket - move the lever backward

The functions of the Bucket Control Lever may be reconfigured. The control valve does not work if the door is open or if the parking brake is not released.

8. Ride control

Pressing this button activates the ride control, which appears on the display. The system engages only when boom is in down position, second gear is on and driving speed fulfills the limit set with parameters. Indicator light in the instrument panel comes on when the system activates.

The ride control system downspeed automatically when boom is used. The ride control system is activated automatically after the boom has been used, when the corresponding terms of activation above are fulfilled. The ride control system is disconnected if the control button is pressed second time.

10. Horn

11. Bucket counter

Push the button before dumping to add each bucket to counter. The value of bucket counter is on the display.

12. Bucket Shaking

Pushing the button applies faster bucket movements when moving the control lever. Shake the bucket in order to drop extra or loose material from the bucket before hauling.
