Theoretical Aspects of Heterogeneous Catalysis John B. Moffat, 2013-03-09 Catalysis involves just about every field of scientific study This means that a multidisciplinary approach is needed in catalytic studies Catalysis involves breaking and forming new bonds and this requires an understanding of either adsorption by bonding to an extended structures or bonding in a coordination sphere Any understanding of catalytic action must necessarily involve an understanding of this bonding Even 200 years ago scientists were aware that a properly treated material such as charcoal could adsorb an enormous quantity of gas In 1812 de Saussure English translation Annal Philosophy 6 241 1815 proposed that the ability of a material to increase the rate of chemical reaction was due to adsorption of the material in the fine structure of the solid so that the concentrations of the reactants were significantly increased and this increase in concentration led to an increase in reaction rate During the 1800s little advance was made in the understanding of adsorption **Trends in Colloid and Interface**

Guczi, 1991-06-25 The aim of this volume is to provide

scientists with a comprehensive summary of new research areas in the activation of carbon monoxide as one of the most reactive molecules and in its applications In order to understand the variety of the reactivity of CO a quantum chemical approach helps the reader to understand the binding state of CO to the solid surface Chapter 1 The structure of the adsorbed CO can be better understood by examining its reactivity towards single crystals in the absence and in the presence of promoters Chapter 2 The first approach in the reactivity study is that of studying catalytic activity of single crystals and structure sensitivity which are summarized in Chapter 3 One of the most prominent effects in the CO activation process is ascribed to the presence of additives promoters which in a real catalyst system are far more complicated than on single

crystal surfaces Chapter 4 The original Fischer Tropsch process applied fused iron or cobalt catalysts which were suitable for producing mainly straight chain hydrocarbons The two most important processes involving CO activation the new FT process and alcohol formation are discussed in Chapters 5 and 7 An important type of catalyst the bimetallic catalysts is discussed in Chapter 6 The role of hydrogen as one of the most frequently used partners in CO activation is discussed in Chapter 8 The field of production of specialty chemicals is an excellent example of the homogeneous catalytic activation of CO Chapter 9 In Chapter 10 an overview is given of the industrial applications of CO chemistry and these are illustrated by working processes The final chapter gives the reader some hints about future progress in the field *Statistical Reference Index* ,1980
