

CHEMISTRY: PERIODIC LAW "SCRAMBLE" LAB

WHAT TO TURN IN:

Unscrambled table

Questions #1-6

Introduction

The present organization of the elements is a product of the first periodic table published by Dmitri Mendeleev in 1869. The basis of his arrangement was the atomic masses of the elements. This approach proved incorrect as it would have placed some elements in a family with dissimilar properties. Henry Moseley rearranged the table on the basis of the atomic numbers of the elements. In accordance with Moseley's revision, the periodic law states the properties of the elements are periodic functions of their atomic numbers.

Each of the known elements has its own set of properties. These range from solid to gas, lustrous to dull, low to high melting points, various colors, etc. The elements are arranged within the periodic table into groups or families (vertical columns) and periods or rows (horizontal rows). This arrangement reflects the repeating nature of the properties of the elements.

In this experiment, you will use your knowledge of periodic properties and a list of clues to correctly arrange the elements from a scrambled periodic table.

Objectives

- To arrange the elements in Groups IA-VIIIA (1, 2, 13-18) according to a list of clues and your knowledge of periodic properties
- To explain the trends of properties in groups and periods

Equipment: scissors, glue stick, blank table, scrambled table of elements

Procedure

1. Obtain a "scrambled" table. Each block on the table represents a different element from Groups IA-VIIIA, (1-18)
2. Cut out blocks A-Z. Use the clues given at the end of the procedure and arrange the elements in their proper order the blank table provided by your teacher. When you are sure of a correct placement, glue the square in place. Elements A-Z will fill the first four rows.
3. Cut out the remaining 16 blocks (these have a * instead of a code letter). Use the information provided in each block and your knowledge of periodic properties to arrange these elements in their proper position on the blank table. Glue the blocks in place in rows five and six. **THESE WILL BE AN EXTRA OPTIONAL GRADE AND WILL NOT AFFECT YOUR LAB SCORE IF YOU GET ANY INCORRECT OR DO NOT DO THEM.**
4. Some information is missing from each block. Predict the values for the missing items from the location of the element on the periodic table. Place your predictions on the table. (You may use a periodic table *only* to determine the symbol for each element.) You must include the element symbol, atomic number, and oxidation number (charge):

was many years ago suggested by Dumas must be true the atomic weights of all the other so called elements must be multiples of that of hydrogen or multiples of that fraction of the hydrogen atom which may result from the dissociation of this body itself If such fraction be very small as compared with the effect of the inevitable errors of experiment the experimental verification or refutation of the law will prove impossible but if it be considerable as for instance onehalf of the commonly

known hydrogen atom or one-fourth as assumed by Dumas the question admits of practical examination The author further questioned the justice of the view taken by Stas of his results that Prout's law is disproved by them or is not supported by them The careful work of Stas and others only proves by close agreement of the results that fortuitous errors have been reduced within narrow limits It does not prove that all sources of constant error have been avoided and indeed this can never be absolutely proved as we never can be sure that our knowledge of the substances we are dealing with is complete He added that of course one distinct exception to the assumed law would disprove it if that exception were itself fully proved but this is not the case Out of the eighteen best known atomic weights ten approximate to integers within a range of variation less than one-tenth of a unit The degree of probability that this is purely accidental is found to be only equal to $1/1097.8$ This seems to illustrate the point that not only is Prout's law not as yet absolutely overturned but that a heavy and *The Periodic Law* David Johnson, 1984 *Mendeleev on the Periodic Law* Dmitri Ivanovich Mendeleev, 2013-04-25 By the dawn of the nineteenth century elements had been defined as basic building blocks of nature resistant to decomposition by chemical means In 1869 the Russian chemist Dmitri Ivanovich Mendeleev organized the discord of the elements into the periodic table assigning each element to a row with each row corresponding to an elemental category The underlying order of matter hitherto only dimly perceived was suddenly clearly revealed This is the first English language collection of Mendeleev's most important writings on the periodic law Thirteen papers and essays divided into three groups reflect the period corresponding to the initial establishment of the periodic law three papers 1869-71 a period of priority disputes and experimental confirmations five papers 1871-86 and a final period of general acceptance for the law and increasing international recognition for Mendeleev five papers 1887-1905 A single easily accessible source for Mendeleev's principle papers this volume offers a history of the development of the periodic law written by the law's own founder *The Development of the Periodic Law* Francis Preston Venable, 1974 *Quiz Yourself Clever!
