1. Using colored pencils or pen, list under the symbol (in this order!) the Atomic Radius, First Ionization Energy, and Electronegativity.
2. Use a different color for each property. Example: Write all of the Atomic radius values in red, all of the First ionization energies in green, and all of the Electronegativities in blue. Of course, you can pick any colors that are available, as long as you are consistent.
3. Observe the trends in each property as you go down the Alkali metal group, and as you go across Period 3.
4. Write out each of the statements written on the opposite side, completing each statement with the observed trend (increase or decrease)

formats creating stronger mental connections Images also evoke emotions and context anchoring abstract ideas into tangible frameworks that are easier to remember In education visuals simplify complex topics through charts infographics and diagrams making information more digestible Digital tools like augmented and virtual reality create immersive experiences that deepen understanding Visual aids also play a critical role in corporate training and everyday memory techniques such as mind maps and color coded notes However effective use of visuals requires balance Overloading learners with excessive imagery can lead to cognitive fatigue The key is integrating meaningful visuals that complement content enhancing engagement without distraction By understanding the brain s affinity for images we can harness visual learning to unlock better retention deeper comprehension and a more impactful learning experience      *AP Chemistry Premium, 2025: Prep Book with 6 Practice Tests + Comprehensive Review + Online Practice* Neil D.
