training in logic some familiarity with philosophical logic the propositional calculus and the predicate c culus is helpful Since my theory makes great use of the notion of structure I refer to it as the structural theory of m etaphor STM STM is a semant ic theory of m etaphor if STM is correct then metaphors are cognitively meaningful and are n trivially logically linked with truth I aim to extend possible worlds semantics to handle metaphors I ll argue that some sentences in natural languages like English have multiple meanings Juliet is the sun has at least two meanings the literal meaning Juliet is the sunkIT and the metaphorical meaning Juliet is the sun MET Each meaning is a function from possible worlds to truth values I deny that these functions are identical I deny that the metaphorical function is necessarily false or necessarily true *Catalogue of the education library in the South Kenington museum* Science museum libr,1893
