Hunsucker, 2013-03-07 In the years since the pioneering efforts of Sir Edward Appleton M A F Barnett G Breit and M A Thye many radio techniques have been employed to investigate the terrestrial ionosphere. The purposes of this book are to exam ine the basic physical interaction process of radio waves with the ionosphere scrutinize each of the radio techniques currently in use and describe the elements of each technique as well as assess their capabilities and limitations I have included some of the history of each technique since we often tend to forget the efforts of the pioneers The interaction of radio waves with the terrestrial ionosphere has been described in considerable detail in several classic treatments e g Ratcliffe 1959 Al pert 1963 Budden 1961 and Davies 1965 Rishbeth and e g Flock 1979 Davies Garriott 1969 and in other more recent books 1990 Hargreaves 1979 and Budden 1985 A few of the radio techniques have been described by Hargreaves 1979 and a book by Giraud and Petit 1978 has also included discussion of several of the techniques The WITS handbook No 2 1989 also contains description of several radio techniques A History of Vertical-incidence Ionsphere Sounding at the National Bureau of Standards Sanford Charles Gladden, 1959 NBS Technical Note ,1962-10 Radio Wave Propagation in an Inhomogeneous Atmosphere James R. Wait, 1959 The Unreliable Nation Edward Jones-Imhotep, 2025-03-18 An examination of how technological failures defined nature and national identity in Cold War Canada Throughout the modern period nations defined themselves through the relationship between nature and machines Many cast themselves as a triumph of technology over the forces of climate geography and environment Some however crafted a powerful alternative identity they defined themselves not through the triumph of machines over nature but through technological failures and the distinctive natural orders that caused them In The Unreliable Nation Edward Jones Imhotep examines one instance in this larger history the Cold War era project to extend reliable radio communications to the remote and strategically sensitive Canadian North He argues that particularly at moments when countries viewed themselves as marginal or threatened the identity of the modern nation emerged as a scientifically articulated relationship between distinctive natural phenomena and the problematic behaviors of complex groups of machines Drawing on previously unpublished archival documents and recently declassified materials Jones Imhotep shows how Canadian defense scientists elaborated a distinctive Northern natural order of violent ionospheric storms and auroral displays and linked it to a machinic order of severe and widespread radio disruptions throughout the country Tracking their efforts through scientific images experimental satellites clandestine maps and machine architectures he argues that these scientists naturalized Canada s technological vulnerabilities as part of a program to reimagine the postwar nation. The real and potential failures of machines came to define Canada its hostile Northern nature its cultural anxieties and its geo political vulnerabilities during the early Cold War Jones Imhotep's study illustrates the surprising role of technological failures in shaping contemporary understandings of both nature and nation Annals of the International Geophysical Year, 1970 Instrumentation Papers, 1968 Publications United States.
