**The Leafhoppers and Planthoppers** L. R. Nault, J. G. Rodriguez, 1985-09-23 The most comprehensive single source available on leafhoppers and planthoppers written to be accessible also to investigators new to these insects Covers their taxonomy morphology behavior population dynamics interactions with microbes including transmission of plant pathogens and key aspects of their biological control such as host plant resistance and parasites The leafhopper and planthopper faunas associated with three important crops are presented in concert with the evolution of host plant and insect **The leafhoppers and planthoppers of Germany (Hemiptera, Auchenorrhyncha)** Herbert Nickel, 2003 **Handbook for the Identification of Leafhoppers and Planthoppers of Rice** Michael R. Wilson, Michael F. Claridge, 1991 Rice is the most important cereal grown in tropical countries and sapsucking leafhoppers and planthoppers Homoptera Auchenorrhyncha reduce yields either by direct feeding or by transmitting virus and virus like pathogens Effective rice pest management requires the accurate identification of any pest species and this handbook provides keys to identify over 70 leafhopper and planthopper species recorded in the major rice growing regions All the major pest species are included as well as others that are frequently found but not yet considered important A comprehensive account of all these species with descriptions diagnoses distributions and notes on biology is given as well a key to nymphal stages of common Asian species and details of the separation of different instars An introduction to the morphology and taxonomic grouping of the Auchenorrhyncha and four pages of colour plates are also included and the volume is completed by a comprehensive and wide ranging bibliography

**The Leafhoppers and Planthoppers** L. R. Nault, J. G. Rodriguez, 1985-09-23 The most comprehensive single source available on leafhoppers and planthoppers written to be accessible also to investigators new to these insects Covers their taxonomy morphology behavior population dynamics interactions with microbes including transmission of plant pathogens and key aspects of their biological control such as host plant resistance and parasites The leafhopper and planthopper faunas associated with three important crops are presented in concert with the evolution of host plant and insect *Planthoppers* R. F. Denno, John R. Perfect, 2012-12-06 Planthoppers include some of the most devastating pests of major agricultural crops throughout the world One species the rice brown planthopper is among the most economically important pests in Asia In past decades government policies encouraged the control of rice planthoppers with synthetic pesticides a tactic which promoted insecticide resistance and often led to the pesticide induced resurgence of pest populations To deter planthopper outbreaks a more ecologically sound management strategy is being implemented one based on a thorough investigation of population dynamics natural enemies and the genetics of host plant and insecticide adaptation In the natural habitats of North America and Europe scientists have also used planthoppers as model organisms to test ecological and evolutionary theory The consequence of these diverse studies is an extremely scattered literature on planthoppers that has never been synthesized from an ecological perspective This volume summarizes what is known about planthopper ecology and biological control It

takes a theoretical approach yet is deeply concerned with the application of theory to the practical problems of pest management *Nematodes and the Biological Control of Insect Pests* RA Bedding,RJ Akhurst,HK Kaya,1993-01-01 Environmental and public health problems arising from the use of chemical insecticides have led to an increasing demand for alternatives for insect pest control Together with this widespread public concern resulting in governmental bans on many of the most effective insecticides and development of insecticide resistance has severely reduced the range of useful insecticides available Alternative control measures such as the biological control of pest insects with parasitoids and predators and microbial biocides have been in field use for several decades Although these alternatives are being continually improved most insect pests are nonetheless still controlled with chemical insecticides This book presents the latest work on the biological control of insects using nematodes it covers a range of topics that will help provide a better understanding of the potential problems involved in developing these nematodes as biological control agents Nematodes infect hundreds of different species from most orders of insects and affect their insect hosts in a variety of ways Proceedings of 2nd International Workshop on Leafhoppers and Planthoppers of Economic Importance M. R. Wilson,L. R. Nault,1987

**Leafhopper Vectors and Plant Disease Agents** Karl Maramorosch,2012-12-02 Leafhopper Vectors and Plant Disease Agents is the second in a multivolume series on vectors vector borne disease agents and plant disease spread This text aims to collect findings in leafhopper vector research to suggest promising frontiers for further research and to call attention to possible practical applications of understanding of leafhopper pathogen plant interactions This book is organized into five parts Opening chapters on the taxonomy bionomics and worldwide importance of leafhopper and planthopper vectors are appropriately relegated to Parts I and II Part III focuses on vector virus interactions of leafhopper planthopper and aphid borne viruses and virus induced cytopathological changes in vectors This part also explains the interactions of mycoplasmalike organisms MLOs and viruses in dually infected leafhoppers planthoppers and plants as well as the transitory vector virus interactions The artificial and aseptic rearing of vectors microinjection technique vector tissue culture and spiroplasmas and its vectors are all covered in Part IV Part V contains chapters on specific leafhopper borne viruses and MLOs leafhopper and planthopper vector control leafhopper borne pathogens of corn stunting diseases Western X disease and leafhopper borne xylem restricted pathogens This text will be valuable for students teachers and researchers of vector pathogen plant relationships Its in depth coverage of leafhoppers and planthoppers as vectors makes this book ideally suited as a supplemental text in graduate entomology and plant pathology courses on insect transmission of plant disease agents

Rice-feeding Insects and Selected Natural Enemies in West Africa E. A. Heinrichs,2004 Introduction Biology and ecology of rice feeding insects Natural enemies of West African rice feeding insects An illustrated key to the identification of selected West African rice insects and spiders Publications of the International Agricultural Research and Development Centers ,1989 **Electron Microscopy of Plant Pathogens** Kurt Mendgen,Dietrich-Eckhardt Lesemann,2012-12-06 Plants fungi

and viruses were among the first biological objects studied with an electron microscope One of the two first instruments built by Siemens was used by Helmut Ruska a brother of Ernst Ruska the pioneer in constructing electron microscopes H Ruska published numerous papers on different biological objects in 1939 In one of these the pictures by G A Kausche E Pfankuch and H Ruska of tobacco mosaic virus opened a new age in microscopy The main problem was then as it still is today to obtain an appropriate preparation of the specimen for observation in the electron microscope Beam damage and specimen thickness were the first obstacles to be met L Marton in Brussels not only built his own instrument but also made considerable progress in specimen preparation by introducing the impregnation of samples with heavy metals to obtain useful contrast His pictures of the bird nest orchid root impregnated with osmium were revolutionary when published in 1934 It is not the place here to recall the different techniques which were developed in the subsequent years to attain the modern knowledge on the fine structure of plant cells and of different plant pathogens The tremendous progress obtained with tobacco mosaic virus is reflected in the chapter by M Wurtz on the fine structure of viruses in this Volume New cytochemical and immunological techniques considerably surpass the morphological information obtained from the pathogens especially at the host parasite interface

Peck, National Research Council Canada, 2001 This is a synthesis of both previously published information and abundant new data derived from field studies on Galagos insects The dynamics and patterns of the evolution ecology and distribution of the entire insect fauna are presented in general The core of the book is an account of the 495 species of insects in the smaller orders with detailed information on their distribution and bionomics      **Brown Planthopper** International Rice Research Institute, 1979      **Insect Vectors and Plant Pathogens** Nachhattar Singh Butter, 2018-08-14 The history of pathogens and vectors unique symptoms of diseases and economic importance of important viral diseases have been dealt with in the introductory chapter of this book While highlighting the role of arthropods nematodes and fungi other agents of the spread of plant pathogens have also been included Important aspects of insect vectors with direct bearing on transmission i e vector identification biology feeding apparatus and mechanism of spread including control of pathogens through vectors are covered comprehensively As aphids and other hemipterous insects are major insect vectors the book stresses on this order There is a focus on the transmission of determinants under different categories of the transmission mechanism The transmission determinant paradigm comprising coat protein and helper component has been expounded with recent cases A brief description of new diseases at least one from each genus of plant viruses has been included in this compendium to elucidate the interaction of vector and virus Phytoplasmal etiology of pathogens has been detailed separately on account of their importance The transmission of plant viruses through insects with biting and chewing type of mouth parts has been discussed in detail as separate chapter The latest research in the field of mites nematodes and fungi as vectors of

plant viruses has been included How the phytotoxemia is different from other crop disorders has been critically explained with support from suitable and common examples of crop disorders The book also highlights the effects of plant viruses on their vectors An account of classification of plant viruses has also been given for better understanding of subject matter Likewise the information on the electron microscope along with its use has been included so as to define the procedure of examining sub microscopic entities The latest developments in the management of plant pathogens through vector management have been discussed with special reference to the use of biotechnology crop protection and plant resistance The book will be of value to the teachers and to researchers It will also be useful for extension workers in managing crop disorders Students and researchers of entomology plant pathology plant protection and virology disciplines will obtain the latest in the field through this book

**Evolutionary Patterns and Processes** D. R. Lees, Dianne Edwards, 1993 Evolution is the central theme of all biology Research in the many branches of evolutionary study continues to flourish This book based on a symposium of the Linnean Society discusses the diversity in current evolutionary research It approaches the subject ambitiously and from several angles bringing together eminent authors from a variety of disciplines paleontologists traditionally with a macroevolutionary bias neontologists concentrating on microevolutionary processes and those studying the very essence of species and those studying the very essence of evolution the process of speciation in living organisms Evolutionary Patterns and Processes will appeal to a broad spectrum of professional biologists working in such fields as paleontology population biology and evolutionary genetics Biologists will enjoy chapters by Stephen J Gould discovering in the much earlier work of Hugo de Vries parallels with his ideas on punctuational evolution Guy Bush considering why there are so many small animals Peter Sheldon examining detailed fossil trilobite sequences for evidence of microevolutionary processes and considering models of speciation as well as others dealing with cytological ecological and behavioral processes leading to the evolution of new species
