**of Passion** Alain Ehrenberg,2020-09-23 Cognitive neuroscience once a specialized area of psychology and biology has enjoyed increased worldwide legitimacy in the last thirty years not only in psychiatry and mental health but also in fields as diverse as education economics marketing and law How can this surge in popularity be explained Has the new science of human behaviour now become the barometer of our conduct and our lives taking the place previously occupied by psychoanalysis Rather than asking if neuronal man will replace social man or how to surmount the opposition between the biological and the social The Mechanics of Passions uncovers hidden relationships between global social ideals and specialized concepts of neuroscience and cognitive science Proposing a historical sociology situated in the dual contexts of the history of sciences and the history of self representation Alain Ehrenberg describes the conditions through which cognitive neuroscience has developed and acquired a strong moral authority in our individualistic society permeated by ideas values and norms of autonomy Cognitive neuroscience offers the promise of turning personal limitations into assets by exploring an individual s hidden potential The Mechanics of Passions identifies this as the echo of social ideals of autonomy affirming that the moral authority of cognitive neuroscience stems as much from cultural norms as from any results of scientific or medical experimentation **The Man Who Mistook His Wife for a Hat** Instaread,2015-09-21 PLEASE NOTE

**An Analysis of Oliver Sacks's The Man Who Mistook His Wife for a Hat and Other Clinical Tales** Dario Krpan, Alexander O' Connor, 2017-07-05 In The Man Who Mistook His Wife for a Hat neurologist Oliver Sacks looked at the cutting edge work taking place in his field and decided that much of it was not fit for purpose Sacks found it hard to understand why most doctors adopted a mechanical and impersonal approach to their patients and opened his mind to new ways to treat people with neurological disorders He explored the question of deciding what such new ways might be by deploying his formidable creative thinking skills Sacks felt the issues at the heart of patient care needed redefining because the way they were being dealt with hurt not only patients but practitioners too They limited a physician's capacity to understand and then treat a patient's condition To highlight the issue Sacks wrote the stories of 24 patients and their neurological clinical conditions In the process he rebelled against traditional methodology by focusing on

his patients subjective experiences Sacks did not only write about his patients in original ways he attempt to come up with creative ways of treating them as well At root his method was to try to help each person individually with the core aim of finding meaning and a sense of identity despite or even thanks to the patients condition Sacks thus redefined the issue of neurological work in a new way and his ideas were so influential that they heralded the arrival of a broader movement narrative medicine that placed stronger emphasis on listening to and incorporating patients experiences and insights into their care
