## Nickel Metal Hydride (NiMH) Batteries

Observe the following guidelines when using Nikon EN-ELH1 and EN-ELH2 NiMH batteries.

- Observe rechargeable battery safety charges. At all times, avoid shorting charges or the EN-ELH1 or EN-ELH2 battery charger battery lead set.

**⚠ Battery may become hot when charged.** Observe this warning after handling batteries during or after charging. Batteries may become hot due to heating and to other performance-related factors after charging under some conditions. This is normal and does not indicate a problem.

- New batteries and batteries that have been left unused for an extended period tend to lose their charge rapidly. This is normal for NiMH batteries and the batteries will accept a charge after being used and recharged accordingly.

Batteries will become even warmer to touch when fully recharged.

- The battery and charger terminals are covered thoroughly with a protective film. Before charging, remove the protective film and other debris that can damage or reduce battery performance.
- They are charged at an ambient temperature of 10–30°C (50–86°F).
- They are not recharged until fully recharged (just until the orange LED light comes on) to help prolong the use and maximize battery recharging.
