ai in biological applications and medicine and towards new ai methods This is an open access book **Handbook of Tissue Optical Clearing** Valery V. Tuchin, Dan Zhu, Elina A. Genina, 2022-02-08 Biomedical photonics is currently one of the fastest growing fields connecting research in physics optics and electrical engineering coupled with medical and biological applications It allows for the structural and functional analysis of tissues and cells with resolution and contrast unattainable by any other methods However the major challenges of many biophotonics techniques are associated with the need to enhance imaging resolution even further to the sub cellular level as well as translate them for in vivo studies The tissue optical clearing method uses immersion of tissues into optical clearing agents OCAs that reduces the scattering of tissue and makes tissue more transparent and this method has been successfully used ever since This book is a self contained introduction to tissue optical clearing including the basic principles and in vitro biological applications from in vitro to in vivo tissue optical clearing methods and combination of tissue optical clearing and various optical imaging for diagnosis The chapters cover a wide range of issues related to the field of tissue optical clearing mechanisms of tissue optical clearing in vitro and in vivo traditional and innovative optical clearing agents recent achievements in optical clearing of different tissues including pathological tissues and blood for optical imaging diagnosis and therapy This book provides a comprehensive account of the latest research and possibilities of utilising optical clearing as an instrument for improving the diagnostic effectiveness of modern optical diagnostic methods The book is addressed to biophysicist researchers graduate students and postdocs of biomedical specialties as well as biomedical engineers and physicians interested in the development and application of optical methods in medicine Key features The first collective reference to collate all known knowledge on this topic Edited by experts in the field with chapter contributions from subject area specialists Brings together the two main approaches in immersion optical clearing into one cohesive book **Advancing Knowledge on Cyanobacterial Blooms in Freshwaters** Elisabeth (Savi) Vardaka, Konstantinos Ar. Kormas, 2020-11-13 Cyanobacterial blooms are a water quality problem that is widely acknowledged to have detrimental ecological and economic effects in drinking and recreational water supplies and fisheries There is increasing evidence that cyanobacterial blooms have increased globally and are likely to expand in water resources as a result of climate change Of most concern are cyanotoxins along with the mechanisms that induce their release and determine their fate in the aquatic environment These secondary metabolites pose a potential hazard to human health and agricultural and aquaculture products that are intended for animal and human consumption therefore strict and reliable control of cyanotoxins is crucial for assessing risk In this direction a deeper understanding of the mechanisms that determine cyanobacterial bloom structure and toxin production has become the target of management practices This Special Issue entitled Advancing Knowledge on Cyanobacterial Blooms in Freshwaters aims to bring together recent multi and interdisciplinary research from the field to the laboratory and back again driven by working hypotheses based on any aspect of mitigating cyanobacterial blooms from ecological theory to applied research **Pulsed Electric**

Fields in Biotechnology Saša Haberl Meglič, Damijan Miklavčič, Eugene Vorobiev, 2021-06-17 **Advances in Veterinary Dermatology, Volume 7** Sheila M. F. Torres, Linda Frank, Ann Hargis, 2013-06-10

Representing the state of the art of veterinary dermatology around the globe *Advances in Veterinary Dermatology Volume 7* presents selected scientific papers from the Seventh World Congress of Veterinary Dermatology The Congress held in Vancouver Canada in July 2012 was organized with the support of the World Association for Veterinary Dermatology WAVD and its affiliated societies A record number of delegates attended from over 50 countries to take advantage of the exceptional scientific program Cutting edge information was presented as review papers and original studies in the areas of Allergy Immunology Skin Biology Therapy Infectious Diseases Oncology These peer reviewed and edited papers were published in the journal *Veterinary Dermatology* in volume 24 issue 1 and are included in this hardbound book volume of the conference proceedings Also included are 13 Workshop Reports which summarise sessions where experts presented topics in various areas providing a wonderful opportunity for colleagues to ask questions and exchange ideas in an informal atmosphere A vital resource for all practising veterinarians and researchers interested in the field of veterinary dermatology *Vibrant Architecture* Rachel Armstrong, 2015-08-17 This book sets out the conditions under which the need for a new approach to the production of architecture in the twenty first century is established where our homes and cities are facing increasing pressures from environmental challenges that are compromising our lives and well being *Vibrant architecture* embodies a new kind of architectural design practice that explores how lively materials or vibrant matter may be incorporated into our buildings to confer on them some of the properties of living things such as movement growth sensitivity and self repair The theoretical and practical implications of how this may occur are explored through the application of a new group of materials Characteristically these substances possess some of the properties of living systems but may not have the full status of being truly alive They include forms of chemical artificial life such as dynamic droplets or synthetically produced soils As complex systems they are able to communicate directly with the natural world using a shared language of chemistry and so negotiate their continued survival in a restless world *Vibrant architecture* may create new opportunities for architectural design practice that venture beyond top down form finding programs by enabling architects to co design in partnership with human and nonhuman collectives which result from the production of post natural landscapes Ultimately vibrant architecture may operate as an ecological platform for human development that augments the liveliness of our planet rather than diminishes it

Electroporation-Based Therapies for Cancer Raji Sundararajan, 2014-08-28 *Electroporation Based Therapies for Cancer* reviews electroporation based clinical studies in hospitals for various cancer treatments including melanomas head and neck cancers chest wall breast carcinomas and colorectal cancers as well as research studies in the lab using cell lines primary cells and animals Cancer kills about one American per minute amounting to over 500 000 deaths in the United States and millions worldwide each year There is a critical need for safe effective and affordable alternative treatment modalities

especially for inoperable recurring and chemo resistant cancers that do not respond well to current treatment regimen An electrical pulse mediated enhanced drug delivery technique known as electroporation is one way to effectively treat these patients This technique is especially suitable for low and middle income countries where lack of infrastructure and resources leads to cancer diagnoses at late stages This quick safe effective economical out patient based technique is a boon to these patients for palliative and other care with enhanced quality of life This book features discussions by interdisciplinary authors including practicing oncological surgeons medical professionals and academic and other researchers of the basics and clinical medical applications of electroporation Provides novel and recent clinical applications of electrochemotherapy for various cancers including melanomas sarcomas superficial extreme melanoma chest wall breast carcinoma and colorectal cancers Extensive study of a number of cell lines including human breast cancer lung cancer cervical cancer leukemia and mouse breast cancer using both reversible and irreversible electroporation techniques In vitro study of delivery of various commonly prescribed administered breast cancer chemo and hormone drugs such as Doxorubicin Paclitaxel Bleomycin and Tamoxifen *Single Molecule Tools, Part B: Super-Resolution, Particle Tracking, Multiparameter, and Force Based Methods*

,2010-07-09 Single molecule tools have begun to revolutionize the molecular sciences from biophysics to chemistry to cell biology They hold the promise to be able to directly observe previously unseen molecular heterogeneities quantitatively dissect complex reaction kinetics ultimately miniaturize enzyme assays image components of spatially distributed samples probe the mechanical properties of single molecules in their native environment and just look at the thing as anticipated by the visionary Richard Feynman already half a century ago *Single Molecule Tools Part B Super Resolution Particle Tracking Multiparameter and Force Based Methods* captures a snapshot of this vibrant rapidly expanding field presenting articles from pioneers in the field intended to guide both the newcomer and the expert through the intricacies of getting single molecule tools Includes time tested core methods and new innovations applicable to any researcher employing single molecule tools Methods included are useful to both established researchers and newcomers to the field Relevant background and reference information given for procedures can be used as a guide to developing protocols in a number of disciplines

Order and Fluctuations in Collective Dynamics of Swimming Bacteria Daiki Nishiguchi, 2020-01-31 This thesis focuses on experimental studies on collective motion using swimming bacteria as model active matter systems It offers comprehensive reviews of state of the art theories and experiments on collective motion from the viewpoint of nonequilibrium statistical physics The author presents his experimental studies on two major classes of collective motion that had been well studied theoretically Firstly swimming filamentous bacteria in a thin fluid layer are shown to exhibit true long range orientational order and anomalously strong giant density fluctuations which are considered universal and landmark signatures of collective motion by many numerical and theoretical works but have never been observed in real systems Secondly chaotic bacterial turbulence in a three dimensional dense suspension without any long range order as described in the first half is demonstrated to be capable of achieving antiferromagnetic vortex order by imposing a small number of constraints with appropriate periodicity The experimental results presented significantly advance our fundamental understanding of order and fluctuations in collective motion of motile elements and their future applications
