authors provide an extensive discussion of prior research on spatial prepositions and motion verbs devoting chapters to the compositional semantics of motion sentences the formal representations needed for computers to reason qualitatively about time space and motion and the methodology for annotating corpora with linguistic information in order to train computer programs to reproduce the annotation The applications they illustrate include route navigation the mapping of travel narratives question answering image and video tagging and graphical rendering of scenes from textual descriptions The book is written accessibly for a broad scientific audience of linguists cognitive scientists computer scientists and those working in fields such as artificial intelligence and geographic information systems
