

CYGNUS (SIG-nus)

English Name: the swan

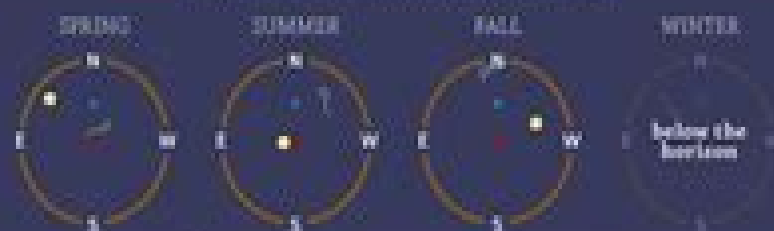

Size: large, 16th largest

When to Look: most prominent from July through October and visible in the late evening sky from May through December

Notes: A beautiful constellation that lies across a rich section of the Milky Way. Easy to spot because of its bright star Deneb, which marks the swan's tail and also forms the northeast corner of the Summer Triangle. The main stars of the constellation form a cross, making it easy to trace and leading to its popular nickname, the Northern Cross.
