

1.6 ACCESSING G1000 FUNCTIONALITY

MENUS

The G1000 has a dedicated **MENU** Key that when pressed displays a context-sensitive list of options. This options list allows the user to access additional features or make settings changes which specifically relate to the currently displayed window/page. There is no all-encompassing menu. Some menus provide access to additional submenus that are used to view, edit, select, and review options. Menus display 'No Options' when there are no additional features or settings for the window/page selected.

Navigating a menu:

- 1) Press the **MENU** Key to display the menu.
- 2) Turn the **FMS** Knob to scroll through a list of available options (a scroll bar always appears to the right of the window/box when the option list is longer than the window/box).
- 3) Press the **ENT** Key to select the desired option.
- 4) Press the **CLR** Key or **FMS** Knob to remove the menu and cancel the operation.

DATA ENTRY

The **FMS** Knob can be used for directly entering alphanumeric data (e.g., Flight ID, waypoint identifiers, barometric minimum descent altitude) into the G1000. In some instances, such as when entering an identifier, the G1000 tries to predict the desired identifier based on the characters being entered. In this case, if the desired identifier appears, use the **ENT** Key to confirm the entry without entering the rest of the identifier manually. This can save the pilot from having to enter all the characters of the identifier.

Besides character-by-character data entry, the system also provides a shortcut for entering waypoint identifiers. When the cursor is on a field awaiting entry of a waypoint identifier, turning the small **FMS** Knob counter-clockwise accesses three different lists of waypoint identifiers for quick selection: flight plan (FPL), nearest (NRST), and recently-entered (RECENT). The G1000 automatically fills in the identifier, facility, and city fields with the information for the selected waypoint.
