

ROLM Corporation was founded in 1970 with five goals.

## To Make a Profit

### To Grow

## To Offer Quality Products and Customer Support

### To Create a Great Place to Work

The four goals are closely interrelated. One cannot exist without the others. In order for ROLM to grow, it must offer quality products and customer support. In order to grow, it must profit. And in order to develop quality products and customer support, ROLM must maintain a solid relationship conducted in credibility and productivity.

In the course of our history, our top priorities have proven successful in achieving the four goals. These priorities have become integral to the identity of culture at ROLM. The goals and the attitudes which together constitute the ROLM philosophy.

ROLM Philosophy provides a road for the highly motivated employee. We do not have to maintain an entrepreneurial spirit and to invest financially through formal decentralization of responsibility and authority. This approach inherently leads to efficiency of action.

However, we believe that is the only environment that provides the individual freedom required for creative thinking and rapid response to the changing needs of the marketplace. We are convinced that a highly structured hierarchical organization is much less effective than our representative company that form of organization would make others for excellent people as well as ROLM.

ROLM Philosophy is the basis for most of our business policy. In addition, much of what we are doing at ROLM and where we are headed. This statement of the Philosophy is presented for your consideration and implementation.

## To Make a Profit

A primary reason for the existence of most businesses is to produce wealth, and make profit. Making a profit is necessary to finance the business and survive. The conditions under which an individual works for long periods are determined by the quality of the products and quality of customer support.

Profit is the result of the difference between the revenue and the cost of the goods and services produced. Profit is the result of the difference between the revenue and the cost of the goods and services produced.

Today, making a profit is necessary to fund the business and to fund the growth of the business. A company must make a profit to survive. A company must make a profit to survive. A company must make a profit to survive. A company must make a profit to survive.

**Tutorial Introduction** L. Scott Hansen,2018-03 This unique text and video set presents a thorough introduction to Autodesk Inventor for anyone with little or no prior experience with CAD software It can be used in virtually any setting from four year engineering schools to on the job use or self study Unlike other books of its kind it begins at a very basic level and ends at a very advanced level It s perfect for anyone interested in learning Autodesk Inventor quickly and effectively using a learning by doing approach Additionally the extensive videos that are included with this book make it easier than ever to learn Inventor by clearly demonstrating how to use its tools The philosophy behind this book is that learning computer aided design programs is best accomplished by emphasizing the application of the tools Students also seem to learn more quickly and retain information and skills better if they are actually creating something with the software program The driving force behind this book is learning by doing The instructional format of this book centers on making sure that students learn by doing and that students can learn from this book on their own In fact this is one thing that differentiates this book from others the emphasis on being able to use the book for self study The presentation of Autodesk Inventor is structured so that no previous knowledge of any CAD program is required This book uses the philosophy that Inventor is mastered best by concentrating on applying the program to create different types of solid models starting simply and then using the power of the program to progressively create more complex solid models The Drawing Activities at the end of each chapter are more complex iterations of the part developed by each chapter s objectives Since CAD programs are highly visual there are graphical illustrations showing how to use the program This reinforces the learn by doing philosophy since a student can see exactly what the program shows and then step through progressive commands to implement the required operations Rather than using a verbal description of the command a screen capture of each command is replicated *Government reports annual index* ,199? *Official Gazette of the United States Patent and Trademark Office* ,1994 **Software Engineering**
