

## D-5 Portable Compact Disc Player - Including - Troubleshooting Guide and Service Notes

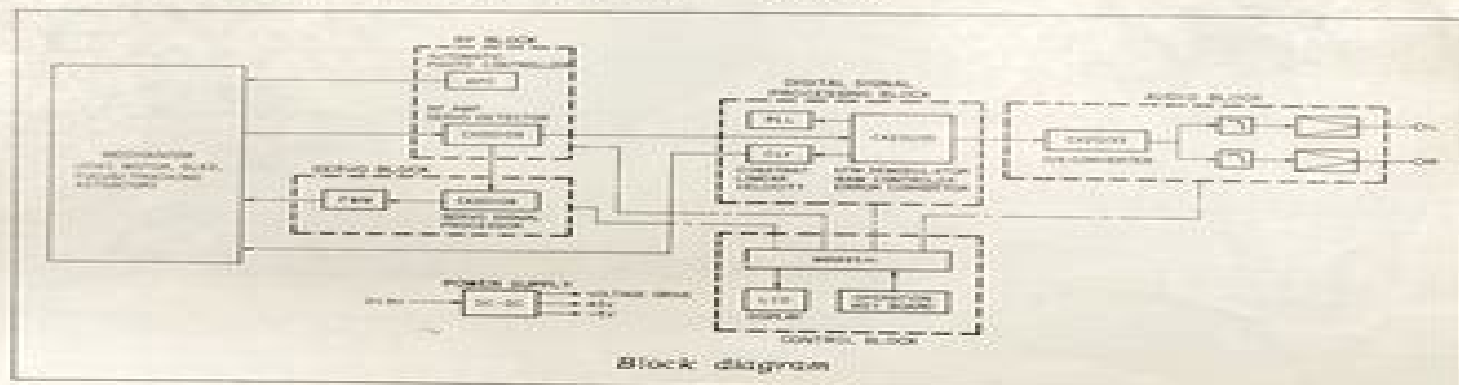

### Introduction

The D-5, Portable CD-player, made its debut in the CD-market in 1984, only two years since the CDP-101 was first introduced in the market in October 1982. The

D-5 packs almost everything in the CDP-101 into a remarkably small package of 1/20th the volume and 1/10th the weight of the first CD-player. The key is a miniaturized optical block and newly developed LSI (Large Scale Integration) IC's of even higher integration. Four LSI IC's do most of the processing in the D-5: CX20109, CS20108, CS23035 and CX20133.

- CX20109 preconditions analog signals from the optical block to the digital processing and servo blocks. This circuitry was discrete in the CDP-101.

- CX20108 is a servo signal processor which generates three major servos in the D-5: FOCUS, TRACKING AND SLED servos. The LSI-IC is controlled by a MPU. This block was also discrete circuitry in the CDP-101.
