INTRUST 2009 was the first international conference on the theory, technologies, and applications of trusted systems. It was devoted to all aspects of trusted computing systems, including trusted modules, platforms, networks, services, and applications, from their fundamental features and functionalities to design principles, architecture, and implementation technologies. The goal of the conference was to bring academic and industrial researchers, designers, and implementers together with end users of trusted systems in order to foster the exchange of ideas in this challenging and fruitful area. The program consisted of 3 invited talks and 20 contributed papers. The invited speakers were Wenchang Shi (Renmin University of China), David Wooten (Microsoft), and Scott Rotondo (Sun Microsystems). The first speaker provided a paper which is included in these proceedings. Special thanks are due to these speakers. The contributed talks were arranged with two main tracks: one devoted to academic aspects of trusted computing systems addressed by these proceedings, and the other devoted to industrial aspects. The contributed papers were selected out of 42 submissions from 13 countries. The refereeing process was rigorous, involving at least three and mostly more independent reports being prepared for each submission. An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience, but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. *Sonic Interaction Design* gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as

mobile music sensorimotor learning rehabilitation and gaming The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers architects interaction designers media artists product designers and urban planners Taken together the chapters provide a foundation for a still emerging field affording a new generation of designers a fresh perspective on interactive sound as a situated and multisensory experience Contributors Federico Avanzini Gerold Baier Stephen Barrass Olivier Bau Karin Bijsterveld Roberto Bresin Stephen Brewster Jeremy Coopersotck Amalia De Gotzen Stefano Delle Monache Cumhuriyet Erkut George Essl Karmen Franinovi Bruno L Giordano Antti Jylh Thomas Hermann Daniel Hug Johan Kildal Stefan Krebs Anatole Lecuyer Wendy Mackay David Merrill Roderick Murray Smith Sile O Modhrain Pietro Polotti Hayes Raffle Michal Rinott Davide Rocchesso Antonio Rod Christopher Salter Zack Settler Stefania Serafin Simone Spagnol Jean Sreng Patrick Susini Atsu Tanaka Yon Visell Mike Wezniewski John Williamson     Voice & Data ,2007     **Rapid Mobile Enterprise Development for Symbian OS** Ewan Spence,2005-08-19 A guide to programming Symbian OS smartphones using OPL The Open Programming Language a simple to learn open source scripting language ideal for fast track development of enterprise applications This book provides a hands on development environment for both the experienced and aspiring programmer demonstrating the ease of use of Symbian OS technologies through the utilization of OPL OPL has a shallow learning curve which allows bespoke corporate tools to be developed in house by technical staff who aren't necessarily trained programmers **Rapid Mobile Enterprise Development For Symbian OS** provides a clear guide on both how to program and understanding the structure of the language through a keyword dictionary Any bespoke OPL application can grow with a company eventually providing access to more advanced C code through OPX extensions From the home programmer who wants to do more with their phone to the enterprise developer **Rapid Mobile Enterprise Development For Symbian OS** is the ideal starting point for simple innovative application design using OPL Source code is available from [www.symbian.co.uk/books](http://www.symbian.co.uk/books)     **International Commercial Arbitration** Gary B.
