Source 2: What Goes on in a Beehive?

Everyone knows that honey comes from bees. But what really happens inside a beehive? You might be surprised at how fascinating and complex a beehive can be.

A beehive is where a colony of bees live. It can occur naturally or be carefully controlled by a beekeeper. Within the hive, bees work together to collect food, raise their young, and keep the colony running smoothly.

There are three main types of bees in a colony: the worker bees, the drones, and the queen bee. While there are thousands of worker and drone bees, there is only one queen bee per colony.

The worker bees are female. They build the wax honeycomb structure. They feed the queen and her young. They also protect the hive and go outside to collect pollen, nectar, and water.

Drone bees are male. Their job is to mate with the queen bee. They are only allowed in the hive during the warmer months. In the winter, they are prevented from entering the hive and freeze in the cold.

The queen bee is always female. Her job is to lay the eggs. She often lays between 1,000 and 1,500 eggs a day!

All of this organization and work leads to the production of honey, which humans use as both a sweetener and a medicine. Even though there are over twenty thousand species of bees in the world, only one is used by beekeepers to make honey: the Western honeybee.

The average honeybee makes about a 1/12 a teaspoon of honey in its entire lifetime. Think about that before you throw out that last little bit of honey left in the jar!

Hochman,Natalie Wexler,2017-07-27 Why you need a writing revolution in your classroom and how to lead it The Writing Revolution TWR provides a clear method of instruction that you can use no matter what subject or grade level you teach The model also known as The Hochman Method has demonstrated over and over that it can turn weak writers into strong communicators by focusing on specific techniques that match their
