

ELECTRONIC CONNECTIONS & WIRING

Power connection

- **B+**(12V) : Connect a red wire to the car battery or other power source.
- **REMOTE**: Connect an orange wire to remote activating (12V DC) wire of car stereo or equalizer.
- **GND** : Connect a black wire to the car chassis for ground connection.

9. Input Grounding: For most systems you can leave this jumper set in the **BALANCED** position. In some systems, the source unit may look for a ground through the RCA connectors. In this event, you should go ahead and change the jumpers to the **UNBALANCED** position.

10. Ground Isolation Jumpers: Occasionally alternator whine may appear in a system because the source unit and amplifier may use different grounding. To help in this situation, we have provided alternative grounding connections. Make sure your system is turned **OFF** before you move these jumpers.

11. Bass Output Control Jumpers: Not all systems are designed the same, some systems are designed strictly for **SPL** (sound pressure level) while others are a little more tame. The Bass Maximizer circuit can either increase or decrease the signal voltage of the Bass Restoration Circuit. Depending upon your system, you may opt to change these jumpers to a higher or lower setting to maximize your bass output and protect your speakers. In most systems the factory setting will suit you fine. We recommend you try the factory setting first.
