Tropical Cyclone Modeling and Prediction: Advances in Model Development and Its Applications Xuejin Zhang, Robert Rogers, Krishna K. Osuri, Vijay Tallapragada, Zhan Zhang, 2025-06-02 Tropical cyclones TCs can cause billions of dollars in property damage and up to thousands of life losses globally every year In order to mitigate these socioeconomic impacts scientists have strived in developing sophisticated numerical modeling systems to provide better tools for research and forecast communities especially in those coastal countries and regions that are impacted substantially by TCs in the past several decades Recently several accelerated efforts were made by several research and operational centers after tremendous property and life losses by landfall TCs in the North Atlantic the Western North Pacific and the North Indian Ocean basins The modeling systems in regional forecast centers are planning to upgrade to the next generation or make significant advances through those accelerations In this Research Topic the goal is to document the latest developments physics improvements data assimilation holistic forecast systems and their applications Themes include the significant model new features high resolution physics for TC applications data assimilation methodology and observational data impacts forecast experiments model verification and validation Studies on the role of physical processes associated with the boundary layer convection and microphysics radiation land surface processes air sea wave processes are encouraged The model evaluations including quantitative precipitation forecasts and tools and products for TC research and

forecasts are welcome as well Novel studies and latest model developments having a research to operation R2O transition possibility will be considered for publication The ultimate goal is to exchange research ideas advances and understanding across the global TC communities We welcome Original Research and Review Articles from development observational numerical modeling and forecasting perspectives on TCs Articles can include but are not limited to the following topics Model development TC vortex initialization algorithm High resolution physics for TC Air sea wave interactions Model tracking and intensity verification Data assimilation methods Observational data impacts Model evaluation tools Model evaluation comparison products for research and forecasts and Novel studies based on new findings and methodology

performance continues to outstrip interconnect and packaging capabilities and hence there exist many difficult engineering challenges most notably in power management noise isolation and intra and inter chip communication 3D Si integration is the right way to go and compete with Moore's law more than Moore versus more Moore However it is still a long way to go In this book Fengyuan SUN proposes new substrate network extraction techniques Using this latter the substrate coupling and loss in IC's can be analyzed He implements some Green TLM Transmission Line Matrix algorithms in MATLAB It permits to extract impedances between any number of embedded contacts or and TSVs He does investigate models of high aspect ratio TSV on both analytical and numerical methods electromagnetic simulations This model enables to extract substrate and TSV impedance S parameters and parasitic elements considering the variable resistivity of the substrate It is full compatible with SPICE like solvers and should allow an investigation in depth of TSV impact on circuit performance *Report of the ...
