Sustainable Slope Stabilisation using Recycled Plastic Pins Sahadat Hossain, Sadik Khan, Golam Kibria, 2017-06-14 Landslides and slope failure are common in the US and rest of the world The landslides cause

significant damage to infrastructure and millions of dollars are required each year to fix the slope. A sustainable and cost-effective option to stabilise the slope can have significant benefits as it will reduce the cost of maintenance and when using recycled pins it may help the environment at the same time. The recycled plastic pin is made from recycled plastic bottles and other plastic waste. Several demonstration projects already proved the effectiveness of RPP as an alternative option to fix slope failure with a maximum failure depth of 7.8 ft. In this book, every detail of the slope stabilisation technique using recycled plastic pins, including the design techniques and several case studies, are included. This will help to explain the basics of this important technique and will be used as reference to design the slope stabilisation scheme using recycled plastic pins.

Geotechnical Engineering For Disaster Mitigation And Rehabilitation - Proceedings Of The International Conference (With Cd-rom) Jian Chu, Kok Kwang Phoon, Kwet Yew Yong, 2005-12-09. After the devastating disaster caused by the tsunami on 26 December 2004, disaster mitigation and rehabilitation have become some of the most pressing topics for discussion in geotechnical engineering and related professions. Some of the most important contributions to this discussion were made during the International Conference on Geotechnical Engineering for Disaster Mitigation and Rehabilitation, the first of its kind held in the Asia Pacific region. It was organized by the Joint Working Group on Geotechnical Engineering for Disaster Mitigation and Rehabilitation (JWG DMR), which is supported by national geotechnical societies from Australia, China, India, Indonesia, Japan, South Korea, Southeast Asia (comprising Malaysia, Singapore, Taiwan, and Thailand), and Sri Lanka. Disaster management encompasses diverse topics such as natural disasters (tsunamis, earthquakes, landslides, etc.), mitigation, early warning, and prediction systems, hazard mapping, risk analysis, coastal protection works, etc., rehabilitation and reconstruction, difficult soils, and ground treatment design against earthquakes and other natural disasters, etc., and many others including soil dynamics, liquefaction, stability, and environmental protection. This volume contains over 100 high-quality papers contributed by authors from participating countries, including keynote and invited lectures delivered by eminent researchers and practitioners. The proceedings will benefit the geotechnical profession as a whole, in particular those who are involved in disaster prevention, mitigation, rehabilitation, and reconstruction works. In addition, the contributions will add impetus to research and development in this important domain. The long-term goal is to mitigate the unacceptable magnitude of destruction and the number of human lives lost, such as in the recent 2004 tsunami tragedy.

Soil Improvement and Ground Modification Methods Peter G. Nicholson, 2014-08-29. Written by an author with more than 25 years of field and academic experience, *Soil Improvement and Ground Modification Methods* explains ground improvement technologies for converting marginal soil into soil that will support all types of structures. Soil improvement is the alteration of any property of a soil to improve its engineering performance. Some sort of soil improvement must happen on every construction site. This, combined with rapid urbanization and the industrial growth, presents a huge dilemma to providing a solid structure at a competitive price. The perfect guide for new or practicing engineers, this reference covers projects involving soil stabilization.
