1 polar coordinates  $\begin{cases} r = 5.50\text{m} \\ \theta = 240^\circ \end{cases}$

Cartesian coordinates = ???

I know that 5.50m is the distance of point P from the origin...

...and that  $\theta$  is the angle P makes with the positive  $x$ -axis.

To find the Cartesian coordinates  $x$  and  $y$ , I will probably need to use some trig function that relates one of them with  $r$  or  $\theta$ .

$$x = r \cos \theta$$

$$x = (5.50\text{m}) \cos(240^\circ)$$

$$\boxed{x = -2.75}$$

↑  
This makes sense because from my graph,  $x$  should be negative.

$$y = r \sin \theta$$

$$y = (5.50\text{m}) \sin(240^\circ)$$

$$\boxed{y = -4.76}$$

↑  
This also makes sense for the same reason.

Wow!  
Beautiful!

... but just to be sure, I'll check my answer with the pythagorean theorem:

$$r = \sqrt{(-2.75)^2 + (-4.76)^2}$$

$$r = 5.50 \quad \checkmark \quad \text{Yay!!}$$

$$\boxed{\text{Cartesian coordinates: } (-2.75, -4.76)}$$

Machine Learning for Environmental Noise Classification in Smart Cities Ali Othman Albaji, 2024-03-21 We present a Machine Learning ML approach to monitoring and classifying noise pollution Both methods of monitoring and classification have been proven successful MATLAB and Python code was generated to monitor all types of noise pollution from the collected data while ML was trained to classify these data ML algorithms showed promising performance in monitoring the different sound classes such as highways railways trains and birds airports and many more It is observed that all the data obtained by both methods can be used to control noise pollution levels and for data analytics They can help decision making and policy making by stakeholders such as municipalities housing authorities and urban planners in smart cities The findings indicate that ML can be used effectively in monitoring and measurement Improvements can be obtained by enhancing the data collection methods The intention is to develop more ML platforms from which to construct a less noisy The second objective of this study was to visualize and analyze the data of 18 types of noise pollution that have been collected from 16 different locations in Malaysia All the collected data were stored in Tableau software Through the use of both qualitative and quantitative measurements the data collected for this project was then combined to create a noise map database that can help smart cities make informed decisions

*Will We Be Smart Enough?* Earl Hunt, 1995-07-20 The American workforce and the American workplace are rapidly changing in ways that make them increasingly incompatible Advances in automation and telecommunications have eliminated many jobs based on routine tasks and muscle power and fueled the demand for employees who can understand and apply new technologies But as Earl Hunt convincingly demonstrates in *Will We Be Smart Enough* such smart employees will be in dangerously short supply unless fundamental changes are made to our educational and vocational systems *Will We Be Smart Enough* combines cognitive theory demographic projections and psychometric research to measure the capabilities of tomorrow s workforce against the needs of tomorrow s workplace Characterized by sophisticated machinery instant global communication and continuous reorganization the workplace will

call for people to fuse multiple responsibilities adapt quickly to new trends and take a creative approach to problem solving Will Americans be able to meet the difficult and unprecedented challenges brought about by these innovations Hunt examines data from demographic sources and a broad array of intelligence tests whose fairness and validity he judiciously assesses He shows that the U S labor force will be increasingly populated by older workers who frequently lack the cognitive flexibility required by rapid change and by racial and ethnic minorities who have so far not fully benefitted from the nation s schools to develop the cognitive skills necessary in a technologically advanced workplace At the heart of Will We Be Smart Enough lies the premise that this forecast can be altered and that cognitive skills can be widely and successfully taught Hunt applies psychological principles of learning and cognitive science to a variety of experimental teaching programs and shows how the information revolution which has created such rapid change in the workplace can also be used to transform the educational process and nurture the skills that the workplace of the future will require Will We Be Smart Enough answers naysayers who pronounce so many people cognitively disadvantaged by suggesting that new forms of education can provide workers with enhanced skills and productive employment in the twenty first century Hunt s book provides succinct lucid presentations of our best scientific understandings of thinking intelligence job performance and how to measure them Only by comprehending and applying these understandings to develop sound educational and instructional strategies can we create a capable workforce for the digital age John T Bruer President James S McDonnell Foundation
