Expert C# 2005 Business Objects Rockford Lhotka, 2006-11-21 Rockford Lhotka started writing his Business Objects books in 1996 and over the years he s become one of the world s foremost authorities on building distributed object oriented systems His industry standard VB NET

Business Objects book not only addresses changes in NET 2.0 and Visual Studio 2005 but also reflects substantial enhancements and improvements to the CSLA .NET Framework and how it can be used to create enterprise level .NET applications. Expert C# 2005 Business Objects is for developers who want to see Lhotka's ideas applied in the C# idiom. The book takes you from an opening discussion of logical architectures to detailed n-tier deployment options using the CSLA .NET Framework. The depth of Rockford's thinking now influences developers across language boundaries. With this book you can learn directly from the expert whose framework has become universally accepted and respected. Expert C# 2008 Business Objects Rockford Lhotka, 2009-01-22. Do you want to create .NET applications that provide high performance and scalability? Do you want to employ object oriented programming techniques in a distributed environment? Do you want to maximize the reuse and maintainability of your code? Then this book is for you. In Rockford Lhotka's Expert C# 2008 Business Objects you will learn how to use advanced .NET Framework capabilities alongside object oriented design and programming to create scalable, maintainable, object oriented applications. Better still, this book includes Component based Scalable Logical Architecture (CSLA .NET 3.6), a widely used framework on which you can base your application development. By using the concepts and framework in the book, you can focus more on your business issues and less on technology. Using VS 2008 and C# 3.0, Rockford Lhotka shows you how CSLA .NET 3.6 allows great flexibility in object persistence so business objects can use virtually any data sources available. The CSLA framework supports 1, 2, and n-tier models through the concept of mobile objects. This provides the flexibility to optimize performance, scalability, security, and fault tolerance with no changes to code in the UI or business objects. Business objects based on CSLA .NET 3.6 automatically gain many advanced features that simplify the creation of Windows forms, web forms, WPF, WCF, WF, and web services interfaces and LINQ. **Official**
