Maik Wurdell, 2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e.g. pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e.g. walking to the speaker's desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e.g. display slides at the projection canvas Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved The thesis introduces a task modeling language in order to cope with the given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms Smart book : daily English conversation for beginner and Intermediate levels

Smart Cities Hussein T. Mouftah, Melike Erol-Kantarci, Sameh Sorour, 2020-12-17 This book presents a comprehensive coverage of the five fundamental yet intertwined pillars paving the road towards the future of connected autonomous electric vehicles and smart cities. The connectivity pillar covers all the latest advancements and various technologies on vehicle to everything V2X communications, networking and vehicular cloud computing with special emphasis on their role towards vehicle autonomy and smart cities applications. On the other hand, the autonomy track focuses on the different efforts to improve vehicle spatiotemporal perception of its surroundings using multiple sensors and different perception technologies. Since most of CAVs are expected to run on electric power, studies on their electrification technologies, satisfaction of their charging demands, interactions with the grid and the reliance of these components on their connectivity and autonomy is the third pillar that this book covers. On the smart services side, the book highlights the game-changing roles CAV will play in future mobility services and intelligent transportation systems. The book also details the ground-breaking directions exploiting CAVs in a broad spectrum of smart cities applications. Examples of such revolutionary applications are autonomous mobility on demand services with integration to public transit, smart homes and buildings. The fifth and final pillar involves the illustration of security mechanisms, innovative business models, market opportunities and societal economic impacts resulting from the soon to be deployed CAVs. This book contains an archival collection of top quality cutting edge and multidisciplinary research on connected autonomous electric vehicles and smart cities. The book is an authoritative reference for smart city decision makers, automotive manufacturers, utility operators, smart mobility service providers, telecom operators, communications engineers, power engineers, vehicle charging providers, university professors, researchers and students who would like to learn more about the advances in CAEVs, connectivity, autonomy, electrification, security and integration into smart cities and intelligent transportation systems. **Redefining Traffic: How AI Leads The Change** Guanghui

Zhao, 2023-06-28 Advances in Artificial Intelligence (AI) have redefined research and development in many areas, particularly in the direction of engineering research, application of machine learning and the use of deep learning in many aspects of engineering research. This book looks at the impact of AI and how it has transformed transportation in the form of Smart Traffic Management Systems in a world of unmanned systems and autonomous machines. The book explores the problems faced in air, sea and land transport and traffic. It looks into Unmanned Aerial Vehicles (UAVs), autonomous and remotely operated ships, intelligent port management systems and modern urban railway systems. *Redefining Traffic* is a reference book for researchers, engineers and technical personnel specializing in intelligent traffic, artificial intelligence, big data and the Internet of Things (IoT).
