Computer Software Program for On-line Process Control of Production of Portland-cement Concrete Steven A. Ragan, Billy D. Neeley, 1997 This report presents the results of a research program to develop a computer software program SmartPlant which could reduce the cost of concrete mixtures and increase construction productivity by minimizing the adverse effects of materials and mixture variations upon construction operations SmartPlant is comprised of five component programs Most attention was given to seeMIX the mixture proportioning program A laboratory evaluation of this program was conducted in which simulated paving structural and mass concrete mixtures were proportioned using current American Concrete Institute ACI proportioning practices and seeMIX technology Two field evaluations of seeMIX were also conducted SeeMAT A the aggregate database program was also evaluated under field conditions on two occasions SeeMAT C the cement database program and seeMAT P the pozzolan database program were evaluated in the laboratory SeeSTAT the statistical database program was not evaluated The results indicated that seeMIX mixture proportioning technology can proportion concrete mixtures having fresh and hardened properties equal to and in some instances superior to current ACI proportioning practices when richer mixtures such as those used in paving or structural applications are being proportioned SeeMIX was less effective in proportioning lean mass concrete mixtures SeeMAT A seeMAT C and seeMAT P performed well

and were judged to be useful tools both as components of SmartPlant and as stand alone tools While the individual components of SmartPlant were evaluated numerous logistical and technical problems prevented the evaluation of a fully automated SmartPlant system either in the laboratory or the field

Morbach, Andreas Wiesner, Aidong Yang, 2009-12-16 Motivation for this Book Ontologies have received increasing attention over the last two decades Their roots can be traced back to the ancient philosophers who were interested in a conceptualization of the world In the more recent past ontologies and ontological engineering have evolved in computer science building on various roots such as logics knowledge representation information modeling and management and knowledge based information systems Most recently largely driven by the next generation internet the so called Semantic Web ontological software engineering has developed into a scientific field of its own which puts particular emphasis on the theoretical foundations of representation and reasoning and on the methods and tools required for building ontology based software applications in diverse domains Though this field is largely dominated by computer science close relationships have been established with its diverse areas of application where searchers are interested in exploiting the results of ontological software engineering particularly to build large knowledge intensive applications at high productivity and low maintenance effort Consequently a large number of scientific papers and monographs have been published in the very recent past dealing with the theory and practice of ontological software engineering So far the majority of those books are dedicated to the theoretical foundations of ontologies including philosophical treatises and their relationships to established methods in information systems and ontological software engineering
