Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 15 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of the maximum HR. The control group did not exercise. The HR and EE were measured at rest and during exercise at 60% of the maximum HR. The HR and EE were significantly higher in the training group than in the control group at rest and during exercise. The results of this study suggest that a 10-week training program can improve the HR and EE of sedentary, middle-aged women.

If you are not satisfied with your results, follow the instructions carefully and test your original article. If the editor still requests the (a) paragraph and (b) and (c) paragraphs, repeat the analysis with the original data. The original data are available.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, `mountmnt=/usr/bin/netatun/afs`. Depending on the configuration of the system, this may be sufficient. This may require the `afs` to be installed. This type of multi-mount will be pointing on the `afs` group (see `group 1`)
25. Do not include the `afs` of `mountmnt` as `afs` is deprecated
26. Use `mountmnt` to configure the `afs` multi-mount. The `afs` group is the `afs` group. The `afs` group is the `afs` group.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - 1. Turn off the lights at the end of the day.
 - 2. Avoid excessive light intensity, the length of the day and the light spectrum (the color of the light) are important.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the light spectrum to be most similar to the spectrum of the sun at the end of the day. The spectrum of the sun is most similar to the spectrum of the sun at the end of the day.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the light spectrum to be most similar to the spectrum of the sun at the end of the day.

When you install your T-Value One Connection, improper installation of all four screws (50 connections for One Connection®) will affect the overall health, safety and life of the system. Proper ventilation is critical to maintain proper ventilation. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will increase its output level until the marginal revenue is equal to the marginal cost.
