This product is prohibited from indoor unit installation. Don't use pipe checking operation and Auto Addressing Mode when one indoor unit is installed.

- Switch the system on and wait for code "E 1 99" to appear on the display of the external unit (this requires approximately 60 seconds **).
- As soon as code "E 1 99" displays, press once the red button (R1) shown on the figure on the side of the page.

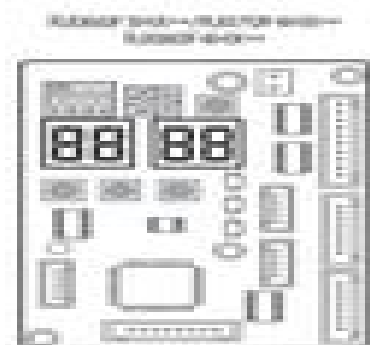

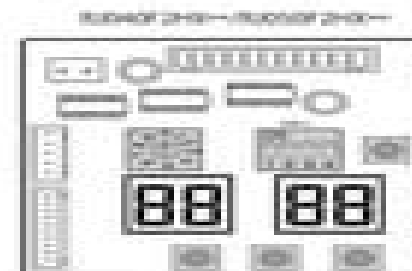

If the quantity of indoor units connected is lower than maximum connectable to outdoor unit, the binary switch (SW2) has to be positioned, in order to select a number equal to indoor units' quantity you connected.

- After the operations described above have been performed, the system starts in Cooling or Heating mode, depending on the external ambient temperature. After a few minutes (from a minimum of 3 to 5 minutes for the internal unit), the system stops automatically, completing the self test and addressing procedure.
"1-5" appears on the display of the external unit.
- 30 seconds after the display of "1-5" that confirms the correct execution of the procedure, the following codes (if four internal units are connected) display in sequence on the display of the external unit:

Display 1	Display 2	Description
00	00	The outdoor unit is communication correctly together the indoor unit connected to refrigerant pipe A.

02	00	The outdoor unit is communication correctly together the indoor unit connected to refrigerant pipe C.
03	00	The outdoor unit is communication correctly together the indoor unit connected to refrigerant pipe D.

At this point it is possible to start the internal units in the desired mode.

- If "1-5" doesn't display, the procedure has failed and it is therefore necessary to read ALL the operator's manual before repeating the operating described in steps 1-2-3-4.
