**Defending Assessment Security in a Digital World** Phillip Dawson, 2020-10-26. *Defending Assessment Security in a Digital World* explores the phenomenon of e cheating and identifies ways to bolster assessment to ensure that it is secured against threats posed by technology. Taking a multi disciplinary approach, the book develops the concept of assessment security through research from cybersecurity, game studies, artificial intelligence, and surveillance studies. Throughout, there is a rigorous examination of the ways people cheat in different contexts and the effectiveness of different approaches at stopping cheating. This evidence informs the development of standards and metrics for assessment security and ways that assessment design can help address e cheating. Its new concept of assessment security both complements and challenges traditional notions of academic integrity. By focusing on proactive principles based approaches, the book equips educators, technologists, and policymakers to address both current e cheating as well as future threats.
