design models are often inconsistent with the implementation or among themselves. An additional burden are variants of software systems. To ensure security in this context we present an approach based on continuous automated change propagation allowing security experts to specify security requirements on the most suitable system representation. We automatically check all system representations against these requirements and provide security preserving refactorings for preserving security compliance. For both we show the application to variant rich software systems. To support legacy systems we allow to reverse engineer variability aware UML models and semi automatically map existing design models to the implementation. Besides evaluations of the individual contributions we demonstrate the approach in two open source case studies: the iTrust electronics health records system and the Eclipse Secure Storage.

Near Field Communication. Sheli McHugh, Kristen Yarmey, 2022-05-31. Near Field Communication is a radio frequency technology that allows objects such as mobile phones, computers, tags or posters to exchange information wirelessly across a small distance. This report on the progress of Near Field Communication reviews the features and functionality of the technology and summarizes the broad spectrum of its current and anticipated applications. We explore the development of NFC technology in recent years, introduce the major stakeholders in the NFC ecosystem and project its movement toward mainstream adoption. Several examples of early implementation of NFC in libraries are highlighted, primarily involving the use of NFC to enhance discovery by linking books or other physical objects with digital information about library resources but also including applications of NFC to collection management and self checkout. Future uses of NFC in libraries such as smart posters or other enhanced outreach are envisioned as well as the potential for the touch paradigm and Internet of things to transform the ways in which library users interact with the information environment. Conscious of the privacy and security of our patrons we also address continuing concerns related to NFC technology and its expected applications, recommending caution, awareness and education as immediate next steps for
