 Tetta, 2003-07 Since high permeability membranes were first introduced their performance has constantly improved The
 publication at hand focuses on a new polymer polyethersulfone which was designed to provide better hydraulic permeability
 as well as high diffusive performance thus allowing for fine tuning for different clinical applications In the first part of the
 book physico chemical characteristics and ultrastructural features of the polyethersulfone membrane with regard to different
 clinical uses ranging from low to high permeability membranes are dealt with The second part is devoted to clinical
 applications of the polyethersulfone membrane in ESRD Its high biocompatibility combined with the matching set up of the
 hemodialyzer was associated with stable functional efficiency and permeability with regard to albumin amino acids beta 2
 microglobulin and sepsis associated cytokines in different hemodialytic modalities such as hemodiafiltration high flux
 hemodialysis paired hemodiafiltration PHF online and low flux hemodialysis This publication is intended for students
 clinicians and researchers alike Descriptions of innovative technological and methodological approaches regarding the
 evaluation of membrane and dialyzer performances and biocompatibility make it a useful basis for those interested in future
