Polyunsaturated fatty acids PUFAs are an integral part of cell membranes and act through various mechanisms influencing the function of membrane proteins intracellular signalling pathways and gene expression and altering the production of lipid mediators Omega 3 and omega 6 PUFAs share the same metabolic pathways providing bioactive metabolites of different kinds In general an increased presence of omega 3 PUFAs in cell membranes leads to an increased generation of less inflammatory and pro resolving mediators as a result of enzymatic activities on omega 3 rather than omega 6 PUFAs In this regard an optimal ratio of omega 6 and omega 3 fatty acids is important for health The richest dietary source of omega 3 PUFAs is oily fish and other seafood however the sustainability of seafood and the accumulation of toxic substances through the aquatic food chain are global challenges Trends towards sustainable plant based diets mean that modern dietary staples are shifting with momentum leading to ramifications for intakes of omega 3 fatty acids and the essential fatty acid metabolic pathway Subsequently there are growing demands for sustainable food derived sources of omega 3 fatty acids

Emerging Enterobacteriaceae Infections: Antibiotic Resistance and Novel Treatment Options Ghassan M. Matar, 2017-06-02

Enterobacteriaceae are spread worldwide and the diseases they cause may be fatal, especially in immunocompromised patients. Moreover, the high prevalence of ESBL producing *Salmonella* and *Shigella* species worldwide suggests major underlying safety issues. According to the World Health Organization (WHO), 2015, approximately 220 million children contract diarrhoeal diseases every year and 96,000 die. As a result, the increase in single or multi drug resistant foodborne bacterial pathogens is of major public health concern. Moreover, resistance to antimicrobials was found among *Salmonella* spp and *Campylobacter* spp from animals and food and since fluoroquinolones became licensed for use in

animal foods especially for poultry the rate of fluoroquinolone resistant *Salmonella* spp and *Campylobacter* spp in animals and human food and then in human infections rapidly increased To that purpose the findings of the conducted studies in the book chapters 1 highlight surveillance studies reporting the occurrence and distribution of resistance to antimicrobial agents namely to third generation cephalosporins carbapenems and fluoroquinolones 2 describe the mechanisms of transmission of resistance determinants from animals food products and clinical specimens that allow implementation of appropriate measures to control their spread and adopt appropriate therapeutic measures and 3 provide treatment options useful to medical practice Thanks are due to Ms Kohar Kissoyan and Mr Sari Rasheed for the preparation of the E book cover picture The author recognizes the efforts of Dr Elias Rahal for peer editing *"One health" approach for revealing reservoirs and transmission of antimicrobial resistance, volume II* Jean-Marc Rolain,Ziad Daoud,2023-03-17
