Uk Challenger Crash Report:

It Should Never Happen Again Mike Lauder, 2016-05-06 In *It Should Never Happen Again* Dr Mike Lauder questions the value of public inquiries Every day we hear about another inquiry being set up or why the last one failed to deliver the hoped for outcomes A great deal of time and taxpayers money is spent on inquiries and even more on implementing their recommendations but the author suggests that those conducting inquiries might be considered by their own test criminally negligent in the way they do so and that it is no surprise that they do not lead to the learning they should The focus of Mike Lauder s research is the gaps between what is known what knowledge is used by practitioners and those who judge them He contends that the difference between the judicial perspective and that of practitioners who are judged by the inquiry process creates barriers that impede others from learning Crucially inquiry outcomes do not assist the leadership of organisations to improve risk governance *It Should Never Happen Again* is based on research into high profile public inquiries and presidential commissions in the UK the USA Continental Europe and elsewhere Embracing issues ranging from terrorist attacks to pollution fire and air disasters criminal cases banking and bribery scandals and the state of public services Mike Lauder contrasts the judicial perspective of those who inquire the academic perspective of those who know and the practical perspective of those who are required to act and offers new models for understanding risk and its governance **Air Show**

basically safe if it were not for those few unreliable people in it Building on its successful predecessors the third edition of The Field Guide to Understanding Human Error will help you understand a new way of dealing with a perceived human error problem in your organization It will help you trace how your organization juggles inherent trade offs between safety and other pressures and expectations suggesting that you are not the custodian of an already safe system It will encourage you to start looking more closely at the performance that others may still call human error allowing you to discover how your people create safety through practice at all levels of your organization mostly successfully under the pressure of resource constraints and multiple conflicting goals The Field Guide to Understanding Human Error will help you understand how to move beyond human error how to understand accidents how to do better investigations how to understand and improve your safety work You will be invited to think creatively and differently about the safety issues you and your organization face In each you will find possibilities for a new language for different concepts and for new leverage points to influence your own thinking and practice as well as that of your colleagues and organization If you are faced with a human error problem abandon the fallacy of a quick fix Read this book

Hand,2022-02-15 Data describe and represent the world However no matter how big they may be data sets don t indeed cannot capture everything Data are measurements and as such they represent only what has been measured They don t necessarily capture all the information that is relevant to the questions we may want to ask If we do not take into account what may be missing unknown in the data we have we may find ourselves unwittingly asking questions that our data cannot actually address come to mistaken conclusions and make disastrous decisions In this book David Hand looks at the ubiquitous phenomenon of missing data He calls this dark data making a comparison to dark matter i e matter in the universe that we know is there but which is invisible to direct measurement He reveals how we can detect when data is missing the types of settings in which missing data are likely to be found and what to do about it It can arise for many reasons which themselves may not be obvious for example asymmetric information in wars time delays in financial trading dropouts in clinical trials deliberate selection to enhance apparent performance in hospitals policing and schools etc What

becomes clear is that measuring and collecting more and more data big data will not necessarily lead us to better understanding or to better decisions We need to be vigilant to what is missing or unknown in our data so that we can try to control for it How do we do that We can be alert to the causes of dark data design better data collection strategies that sidestep some of these causes and we can ask better questions of our data which will lead us to deeper insights and better decisions
