**Transfer Pricing and Developing Economies** Joel Cooper, Randall Fox, Jan Loeprick, Komal Mohindra, 2017-01-05. Recent years have seen unprecedented public scrutiny over the tax practices of Multinational Enterprise (MNE) groups. Tax policy and administration concerning international transactions, aggressive tax planning and tax avoidance have become an issue of extensive national and international debate in developed and developing countries alike. Within this context, transfer pricing, historically a subject of limited specialist interest, has attained name recognition amongst a broader global audience that is concerned with equitable fiscal policy and sustainable development. Abusive transfer pricing practices are considered to pose major risk to the direct tax base of many countries and developing countries are particularly vulnerable because corporate tax tends to account for a larger share of their revenue. This handbook is part of the wider WBG engagement in supporting countries with Domestic Resource Mobilization (DRM) by protecting their tax base and aims to cover all relevant aspects that have to be considered when introducing or strengthening transfer pricing regimes. The handbook provides guidance on analytical steps that can be taken to understand a country's potential exposure to inappropriate transfer pricing, transfer mispricing and outlines the main areas that require attention in the design and implementation of transfer pricing regimes. A discussion of relevant aspects of the legislative process, including the formulation of a transfer pricing policy and the role and content of administrative guidance, is combined with the presentation of country examples on the practical application and implementation of the arm's length principle and on running an effective transfer pricing audit program. Recognizing the importance of transfer pricing regulation and administration for the business environment and investor confidence, this handbook aims to balance the general objective of protecting a country's tax base and raising additional revenue with investment climate considerations wherever appropriate.

Fueling State Capitalism Andrew Cheon, 2023 Foreign investments by state owned enterprises SOEs in the oil and gas sector began a dramatic climb in the late 1990s amid rising oil prices These investments are widely perceived to be politically driven raising concerns about resource mercantilism and asymmetric interdependence The book begins with the premise that the investments are commercial ventures by ambitious SOEs seeking to become global players Applying the principal agent model the book argues that the realization of their global ambitions depends on two domestic structural factors First democracies can limit investments with questionable viability as it can be politically costly for elected leaders to endorse SOE decisions that prove unprofitable for the state Second bureaucratic structures overseeing the SOEs can help prevent counterproductive behavior conditional upon a clear line of authority among bureaucratic principals on matters pertaining to SOE operations The argument differs from previous approaches by exploring a range of institutional alternatives to privatization for solutions to problems of oil sector governance
