XML Distributed Systems Design Ajay M. Rambhia, 2002 Although much has been made of the impact XML is having on Web development the most significant changes brought about by XML have been in the way distributed systems store and exchange information XML Distributed Systems Design offers in depth architectural models for devising open ended systems and provides templates for complex data interchange and mining theories as related to XML XML Distributed Systems Design addresses core XML technologies such as XSL DTD XML Query Data Warehouses Data Mining Distributed Systems Architecture Web based system design Distributed Systems Framework SOAP SAX and using XML enabled tools for development and problem solving Close attention is given to the way XML changes existing development patterns and paradigms In addition the book presents the new patterns and strategies emerging

in XML system design Formal Methods for Components and Objects Frank S. de Boer, Marcello Bonsangue, Susanne Graf, Willem-Paul de Roever, 2003-12-01 Large and complex software systems provide the necessary infrastructure in all industries today. In order to construct such large systems in a systematic manner, the focus in the development methodologies has switched in the last two decades from functional issues to structural issues: both data and functions are encapsulated into software units that are integrated into large systems by means of various techniques supporting reusability and modifiability. This encapsulation principle is essential to both the object-oriented and the more recent component-based software engineering paradigms. Formal methods have been applied successfully to the verification of medium-sized programs in protocol and hardware design. However, their application to large systems requires the further development of specification and verification techniques supporting the concepts of reusability and modifiability. In order to bring together researchers and practitioners in the areas of software engineering and formal methods, we organized the 1st International Symposium on Formal Methods for Components and Objects (FMCO) in Leiden, The Netherlands, November 5-8, 2002. The program consisted of invited tutorials and more technical presentations given by leading experts in the fields of Theoretical Computer Science and Software Engineering. The symposium was attended by more than 100 people. This volume contains the contributions of the invited speakers to FMCO 2002. We believe that the presented material provides a unique combination of ideas on software engineering and formal methods, which we hope will be an inspiration for those aiming at further bridging the gap between the theory and practice of software engineering.

Process Arnd Schnieders, 2003-09-29 Inhaltsangabe Abstract There are about 230 000 establishments in the Spanish hotel restaurant and catering industry accounting for a turnover of about 15 6 thousand million euros All of them sell food to private consumers On the other hand suppliers and traders supply the catering trade with food and beverage products Usually the different players in this food distribution network trade products by means of orders which are placed manually This is a process which can be enhanced through the application of computer and Internet technology A project lately also supported by the Spanish government is supposed to fill this gap This project is called Catanet and has been established three years ago Actually the Catanet platform is used by more than 100 customers amongst them very important industry players like Lauren Films Pepsi Unilever and Nestle Some of them will carry out a significant part of their overall food orders by the Catanet platform which corresponds to a turnover volume of many million euros In the former version of the Catanet platform clients had to apply a web page based interface in order to use the Catanet services As this approach prohibited the full exploitation of the benefits the use of computer assistance provides e g human participation still constitutes an inevitable and crucial part of the transaction the interaction is completely asynchronous an additional level is being added to the Catanet platform eliminating these shortcomings During the time of this work the number of Catanet customers has grown explosively increasing also the diversity of the customer s computer systems Additionally new subprojects could be launched due to the acquisition of a government grant These encompassed among others new value added services demanded by the customers like an instant messaging module and a module for the automatic update of the local product catalogue The characteristics of the IT infrastructure of the new customers which will carry out transactions with a serious turnover via the Catanet platform and the necessity to integrate the new subprojects required an adaptation of the design of the platform prototype which had been developed by this time and which is described in this work Within this context the decision has been done to use NET Framework based programs on the customer side instead of Java which had been used so far The reasons for this were besides the easier integration with the IT The Object-oriented Thought Process Matt A.
