**Diagrammatic Representation and Inference** Alan Blackwell, Kim Marriott, Atsushi Shimojima, 2004-07-16 Although diagrammatic representations have been a feature of human communication from early history recent advances in printing and electronic media technology have introduced increasingly sophisticated visual representations into everyday life We need to improve our understanding of the role of diagrams and sketches in communication cognition creative thought and problem solving These concerns have triggered a surge of interest in the study of diagrammatic notations especially in academic disciplines dealing with cognition computation and communication We believe that the study of diagrammatic communication is best pursued as an interdisciplinary endeavor The Diagrams conference series was launched to support an international research community with this common goal After successful meetings in Edinburgh 2000 and Georgia 2002 Diagrams 2004 was the third event in the series The Diagrams series attracts a large number of researchers from virtually all academic fields who are studying the nature of diagrammatic representations their use in human communication and cognitive or computational mechanisms for processing diagrams By combining several earlier workshop and symposium series that were held in the US and Europe Reasoning with Diagrammatic Representations DR US Thinking with Diagrams TWD Europe and Theory of Visual Languages TVL Europe Diagrams has emerged as a major international conference on this topic

**Computing Fundamentals** J. Stanley Warford,2013-12-01 The world of computing has always had one corner stone of particular interest to many from educators to practitioners languages And programming languages in particular Over the years we have seen new languages come and much less frequently old languages go It is always tempting to focus on the one language of fashion of the day In this very readable and instructive textbook Stan Warford has done the unusual and risky by taking the programming language Component Pascal that is far from mainstream although it does have roots that are among the strongest in the field Given that the concept of formal language whether at the level of architecture design or implementation language is central to our discipline it is important that students continue to be exposed to a wide variety of languages No single language does everything perfectly or even well and students need to understand this fundamental tradeoff The same holds for frameworks and programming models that need to be designed to allow harmony between the natural ways of a language and the needs to a framework for a particular domain

**Web Information Systems -- WISE 2004 Workshops** Christoph Bussler,Suk-ki Hong,Woochun Jun,Roland Kaschek,Kinshuk,Shonali Krishnaswamy,Seng Wai Loke,Daniel Oberle,Debbie Richards,Amit Sharma,York Sure,Bernhard Thalheim,2004-10-19 The study reported in this paper is an ongoing effort We reported a preliminary analysis of the data in the paper The current experiments varied the subjects to conduct online group learning activities by the communication media such as email and threaded discussion Although we could have easily learned the impact of mobile devices in learning if we divided the subjects to use different hardware such as personal computers personal digital assistant or mobile phones we believe our findings will still be able to provide useful insights on the difficulties that the mobile learners will face in solving problems as a group Our analysis result will also provide baseline information on whether the traits of the successful or failed online groups are applicable to the mobile learners For example we expect the SMS will be a better medium to overcome the major problem of instant communication or the rapid propagation of the information as the mobile phones have built in mechanism to remind the users of the incoming new messages and also the mobile phone users are expected to be interrupted for the incoming messages However we need further investigation of other problems which hinder the optimum online group work For example accuracy of the transferred information was identified as one of the problems of using emails as the communication medium Personal Digital Assistant PDA or SMS are more apt to deliver shorter messages than the typical emails

**Distributed Architecture for the Monitoring and Analysis of Time Series Data** Ruairi O'Reilly, Abstract It is estimated that the quantity of digital data being transferred processed or stored at any one time currently stands at 4 4 zettabytes 4 4 270 bytes and this gure is expected to have grown by a factor of 10 to 44 zettabytes by 2020 1 Exploiting this data is and will remain a signi cant challenge At present there is the capacity to store 33% of digital data in existence at any one time by 2020 this capacity is expected to fall to 15% These statistics suggest that in the era of Big Data the identi cation of important exploitable data will need to be done in a timely manner Systems for the monitoring and analysis of data e g stock markets smart grids and sensor networks can be made up of massive numbers of individual components These components can be geographically distributed yet may interact with one another via continuous data streams which in turn may a ect the state of the sender or receiver This introduces a dynamic causality which further complicates the overall system by introducing a temporal constraint that is di cult to accommodate Practical approaches to realising the system described above have led to a

multiplicity of analysis techniques each of which concentrates on specific characteristics of the system being analysed and treats these characteristics as the dominant component affecting the results being sought. The multiplicity of analysis techniques introduces another layer of heterogeneity that is heterogeneity of approach partitioning the field to the extent that results from one domain are difficult to exploit in another. The question is asked: can a generic solution for the monitoring and analysis of data that accommodates temporal constraints bridge the gap between expert knowledge and raw data and enables data to be effectively interpreted and exploited in a transparent manner be identified? The approach proposed in this dissertation acquires analyses and processes data in a manner that is free of the constraints of any particular analysis technique while at the same time facilitating these techniques where appropriate. Constraints are applied by defining a workflow based on the production, interpretation and consumption of data. This supports the application of different analysis techniques on the same raw data without the danger of incorporating hidden bias that may exist. To illustrate and to realise this approach a software platform has been created that allows for the transparent analysis of data combining analysis techniques with a maintainable record of provenance so that independent third party analysis can be applied to verify any derived conclusions. In order to demonstrate these concepts a complex real world example involving the near real time capturing and analysis of neurophysiological data from a neonatal intensive care unit (NICU) was chosen. A system was engineered to gather raw data, analyse that data using different analysis techniques, uncover information, incorporate that information into the system and curate the evolution of the discovered knowledge. The application domain was chosen for three reasons: firstly because it is complex and no comprehensive solution exists; secondly it requires tight interaction with domain experts thus requiring the handling of subjective knowledge and inference; and thirdly given the dearth of neurophysiologists there is a real world need to provide a solution for this domain.

Events Tourism Violet V. Cuffy, Fiona Bakas, Willem J. L. Coetzee, 2020-10-29. This book presents critical insights and contemporary perspectives for exploring current trends, concerns and prospects of events tourism. It examines modern day global issues facing the events and tourism industry, policymakers, researchers and academics to advance understanding of practice and development of theory. Organised in four parts, this book examines how events tourism is designed, planned and delivered. The first part engages with the core fundamental concepts of events tourism which establish a basic understanding of the field. The second part addresses contemporary issues related to visitor attractions, music festivals, small and user generated events, wanderlust and entrepreneurship. The third part focuses on meetings and challenges in the conference industry, after disasters, the economic impact and other dilemmas of mega events and city and destination concerns. *Aspect-Oriented, Model-Driven Software Product Lines* Awais Rashid, Jean-Claude Royer, Andreas Rummeler, 2011-09-08  
Software product lines provide a systematic means of managing variability in a suite of products. They have many benefits but there are three major barriers that can prevent them from reaching their full potential. First, there is the challenge of scale: a large number of variants may exist in a product line context, and the number of interrelationships and dependencies can rise exponentially. Second, variations tend to be systemic by nature in that they affect the whole architecture of the software product line. Third, software product lines often serve different business contexts, each with its own intricacies and complexities. The AMPLE <http://www.ample-project.net> approach tackles these three challenges by combining advances in aspect-oriented software development and model-driven engineering. The full suite of methods and tools that constitute this approach are discussed in detail in this edited volume and illustrated using three real-world industrial case studies.
