

Climate change is here today

Global average temperature has already risen by around 1°C since pre-industrial levels and climate risks are increasingly apparent.

Annual average temperature in England has also increased by 1°C and will keep increasing – by only 0.5°C by 2100 if the world acts quickly and decisively to cut emissions, but by 4°C+ if current trends continue. We must therefore plan adaptation strategies for a minimum of 2°C and up to 4°C.

UK global leadership on climate change must go hand in hand with domestic action

In line with the Paris Agreement, the UK has legislated to become the first major economy to set a net-zero greenhouse gas emissions target by 2050.

Other countries (e.g. France, New Zealand, Sweden) have moved to adopt net-zero targets of their own, while still more (e.g. the EU) are considering them for the future.

As expected host of the COP in 2020, the UK's credibility rests on more effective action to reduce greenhouse gas emissions to net-zero, and effective planning for climate change adaptation at realistic temperature scenarios.

Despite well-intentioned ambition the UK has fallen behind in progress to tackle and prepare for climate change

Preparing for Climate Change

England is not prepared for the impacts of a 2°C increase in global and UK temperature, let alone a 4°C temperature increase.

Tackling Climate Change

Current policies and plans are **insufficient** to meet the **fourth** or **fifth** carbon budgets (covering 2023-2027 and 2028-2032).

The government has delivered **just 1** policy action **out of 25** recommended by the Committee in 2018.

Of 24 indicators showing underlying progress, **just 7** were on track in 2018.

The required annual rate of emissions reduction for Net Zero is **50% higher** than under the UK's previous 2050 target and **30% higher** than has been achieved on average since 1990.

Only a handful of sectors have plans that consider a **minimum of 2°C**

– water supply, road and rail, flood defences and flood risk planning for infrastructure.

12 of 33 sectors have no plans for long-term climate change at all, including aspects of agriculture, the natural environment, health, infrastructure and business.

None of the 33 priority areas score well in reducing vulnerability and exposure to climate risk.

Uk Committee On Climate Change Report:

The Great Reconfiguration Frank W. Geels, Bruno Turnheim, 2022-05-12 Demonstrates a socio technical reconfiguration approach to low carbon system transitions for researchers policymakers and practitioners Memorandum to the Energy and Climate Change Committee: Post-Legislative Scrutiny of the Climate Change Act 2008 - Cm 8696 Great Britain: Department of Energy and Climate Change, 2013-09-04 This memorandum provides a preliminary assessment of the Climate Change Act 2008 ch 27 ISBN 9780105427087 The Act aims to create a legislative framework for the effective management and delivery of policies to tackle climate change in particular by a establishing an economically credible emissions reduction pathway to 2050 by putting into statute medium and long term targets and a system of carbon budgets b providing greater clarity and predictability for industry to plan effectively for and invest in a low carbon economy c providing a strong evidence base and expertise to underpin statutory targets d establishing a duty on the Government regularly to assess the risks to the UK from climate change and draw up a programme to address them and e creating a power for the Government to require a range of public authorities or statutory bodies to assess and address the impacts of climate change The memorandum concludes that the Act has created an effective legislative framework and is structured to provide a degree of flexibility setting a framework to motivate and enable policy action without being too prescriptive about how the framework should be applied This is required to address the inherent unpredictability around future emissions projections and to ensure that mitigation is not unnecessarily costly In this vein the Climate Change Act allows for a carbon budget level to be amended if it appears to Government that there have been significant changes affecting the basis on which the previous decision was made

Transport and Climate Change Tim Ryley, Lee Chapman, 2012-07-17 This topical volume covers the intersection between transport and climate change with papers from the Transport Climate Change session of the RGS IBG conference in London September 2010 It considers the role of transport modes at varying spatial dimensions and a range of perspectives on the relationship between transport and climate change **OECD Environmental Performance Reviews: United Kingdom 2022** OECD, 2022-06-22 Over the past decade the United Kingdom has reduced several environmental pressures while growing its economy Ahead of its presidency of the 2021 UN Climate Change Conference of the Parties it has led the way by raising its national ambition However air pollution deteriorating natural assets and missed biodiversity targets are all concerns **OECD Economic Surveys: United Kingdom 2011** OECD, 2011-03-16 The 2011 edition of OECD s periodic survey of the UK economy This edition includes chapters covering supporting the recovery and rebalancing the economy improving the functioning of the housing market reforming education in England and climate *Measuring Progress in Adapting to a Changing Climate Insights from OECD countries* OECD, 2024-06-27 To better address the impacts from climate change OECD countries are increasingly making climate change adaptation a policy priority Assessing progress in the implementation of national adaptation policies is a critical step in understanding how adaptation efforts contribute to

strengthening climate resilience and whether they are effective Experience in policy design and implementation has grown significantly however measuring progress remains a challenge for countries Building on a cross country survey and country case studies carried out in Chile Korea the Slovak Republic and the United Kingdom this report provides insights into current OECD country practices in measuring climate adaptation It proposes a framework that can guide countries on what needs to be measured and how and discusses the role that adaptation indicators and a conducive institutional environment can play in strengthening adaptation measurement

Taking forward the UK Climate Change Bill Great Britain: Department for Environment, Food and Rural Affairs, 2007-10-29 This document sets out the Government's response to the public consultation on the draft Climate Change Bill Cm 7040 ISBN 9780101704021 and to the reports of the following Parliamentary Committees during session 2006-07 the Joint Committee on the Draft Climate Change Bill HLP 170 I HCP 542 I ISBN 9780104011379 the Environment Food and Rural Affairs Committee HCP 534 I ISBN 9780215034892 and the Environmental Audit Committee HCP 460 ISBN 9780215035561 The Climate Change Bill seeks to introduce a clear credible and long term framework to support emissions reductions in the UK designed to maximise the social and economic benefits and minimise costs and also sets out an international precedent reinforcing the UK's position as a consistent leader in the field of climate change and energy policy This document explains the main changes the Government intends to make to the Bill taking into account the consultation responses and the recommendations of the three Parliamentary Committees and key elements of the Bill include putting into statute the UK's domestic targets to reduce carbon dioxide emissions through domestic and international action by at least 60 per cent by 2050 and 26 to 32 per cent by 2020 against a 1990 baseline secondary legislation to set binding limits known as carbon budgets on aggregate carbon dioxide emissions over five year periods and the creation of a new independent body the Committee on Climate Change to advise on setting carbon budgets

Energy 2050 Jim Skea, Paul Ekins, Mark Winskel, 2012-06-25 Based on a major cross disciplinary project undertaken by some of the UK's top energy researchers with common scenarios to draw the research together this book views energy policy in the round with climate policy and energy security in a single framework *Energy Humanities. Current State and Future Directions* Matúš Mišík, Nada Kujundžić, 2020-11-02 This edited book explicitly deals with the energy humanities summarising existing knowledge in the area and outlining possible future directions for the nascent field Assuming a variety of disciplinary stances and using a plethora of methodologies to address a number of pressing energy related issues the individual contributions showcase the crucial importance of including the humanities and social sciences into the current discussion on energy Furthermore they illustrate one of the central claims of the energy humanities namely that energy permeates all aspects of our contemporary modes of existence and is inextricably linked with historical political social ideological and cultural issues relationships and practices Through numerous case studies *Energy Humanities and Energy Transition* looks to the past present and future in search of examples of best practices and possible models for pathways to a successful energy

transition and life after oil While much of existing research on energy humanities has been criticised for its excessive focus on oil this book considers a wide range of energy resources including nuclear energy renewables and natural gas Furthermore it brings to the forefront under researched topics such as the colonial legacy inscribed in energy infrastructure and the energy history of the humanities The contributions in this volume explore not only how the perspectives and expertise of the humanities and social sciences can alter the discourse on energy transition and our way of thinking about possible solutions and future scenarios but also how their new focus on energy affects the disciplines themselves Energy Humanities and Energy Transition presents a variety of theories methods topics and disciplinary angles meaning it will be of interest to a wide audience from practitioners and policy makers to students and researchers working across the humanities and social sciences The thematically oriented structure distinct focus of each individual chapter and the comprehensive introduction and conclusion that contextualize the contributions within the wider framework of energy transition make this edited book accessible to readers from many different fields and suitable for various university programs

Renewable Energy in the UK David Elliott, 2019-01-08 This book offers a detailed account of how renewable energy has moved from the margins to the mainstream in the UK and of the battles that have been fought to achieve this trawling through the often troubled history of government involvement The book examines how renewables became what now seem likely to be the dominant energy sources of the future Renewable energy technologies using solar and wind power and other natural energy sources are now supplying around 30% of UK electricity and appear set to continue expanding to supply around 50% within the next decade Although the emphasis of the book is on the UK developments there are compared with those in other countries to provide an overall assessment of the relevance of the UK experience Chapters explore why the UK still lags behind many other countries in deploying renewables in part it is argued due to its continued reliance on nuclear power The book ends with a discussion on what sort of changes may be expected over the coming years The author does not assume a single answer but invites readers to consider the possibilities

Mission Zero Chris Skidmore, 2023-11-28 Mission Zero is a landmark independent report into the delivery of the UK's commitment to net zero carbon dioxide emissions by 2050 Chaired by Chris Skidmore the UK's former Energy Minister who was responsible for signing net zero into law its conclusions set out for the very first time a new economic narrative for climate policy demonstrating the vast financial opportunity that net zero can deliver This timely and crucial report acts as a template for how all countries can map out future challenges and opportunities and above all deliver their own pathway to net zero while also creating new jobs industries and investment for the future Commissioned by the UK's Prime Minister in September 2022 Mission Zero is the largest engagement exercise on net zero conducted to date and has been widely recognised as the most informative and detailed document on the topic covering every sector and aspect of society This important book is a vital piece of work and an indispensable must read for anyone interested in energy climate and sustainability policy

The Shale Dilemma Shanti Gamper-Rabindran,2017-11-30 The US shale boom and efforts by other countries to exploit their shale resources could reshape energy and environmental landscapes across the world But how might those landscapes change Will countries with significant physical reserves try to exploit them Will they protect or harm local communities and the global climate Will the benefits be shared or retained by powerful interests And how will these decisions be made The Shale Dilemma brings together experts working at the forefront of shale gas issues on four continents to explain how countries reach their decisions on shale development Using a common analytical framework the authors identify both local factors and transnational patterns in the decision making process Eight case studies reveal the trade offs each country makes as it decides whether to pursue delay or block development Those outcomes in turn reflect the nature of a country s political process and the power of interest groups on both sides of the issue The contributors also ask whether the economic arguments made by the shale industry and its government supporters have overshadowed the concerns of local communities for information on the effects of shale operations and for tax policies and regulations to ensure broad based economic development and environmental protection As an informative and even handed account The Shale Dilemma recommends practical steps to help countries reach better more transparent and more far sighted decisions **Global**

Energy Paul Ekins,Mike Bradshaw,Jim Watson,2015-09-17 Energy and access to energy are essential to human life civilisation and development A number of energy issues including energy security energy prices and the polluting emissions for energy use now have high prominence on global agendas of policy and diplomacy In addressing these and other global energy issues the purpose of this book is to lay out the broad global energy landscape exploring how these issues might develop in coming decades and the implications of such developments for energy policy There are great uncertainties which will be identified in respect of some of these issues but many of the defining characteristics of the landscape are clear and the energy policies of all countries will need to be broadly consistent with these if they are to be feasible and achieve their objectives The book therefore provides information about and analysis of energy and related resources and the technologies that have been and are being developed to exploit them that is essential to understanding how the global energy system is developing and how it might develop in the future But its main focus is the critical economic social political and cultural issues that will determine how energy systems will develop and which technologies are deployed why by whom and who will benefit from them The book has three Parts Part I sets out the current global context for energy system developments outlining the essential trends of global energy supply and demand and atmospheric emissions from the past and going

forward and their driving forces Part II explores the options and choices covering both energy demand and energy supply facing national and international policymakers as they confront the challenges of the global context outlined in Part I Part III of the book brings together the discussion in Parts I and II with consideration of possible global energy and environmental futures and of the energy policy choices which will determine which future actually comes to pass

Carbon Capture and Storage Mai Bui, Niall Mac Dowell, 2019-11-29 Carbon capture and storage CCS and negative emissions technologies will play an essential role in mitigating the impact of global warming and meeting the temperature targets set by the IPCC and by COP21 Identifying the role and value of CCS relative to other mitigation technologies is of vital importance This book provides a comprehensive up to date overview of the major sources of carbon dioxide emission capture and storage as well as negative emissions technologies and provides insight into the role and value of CCS in the industrial and power sectors The issues associated with commercial deployment of CCS are discussed providing potential approaches to overcome these hurdles through a combination of political economic and R D strategies Carbon Capture and Storage provides the latest global perspective on the role and value of CCS in delivering temperature targets and reducing the impact of global warming With contributions from internationally recognised leaders this book will appeal to graduate students and researchers in academia and industry working in chemical engineering mechanical engineering and energy policy

Sustainable Development Law in the UK Andrea Ross, 2013-03-01 Sustainable development is now widely accepted as a political objective in the UK and elsewhere but to what extent has the UK's rhetoric on sustainable development become a reality The aim of this book is to critically examine the UK's approach to promoting and delivering sustainable development It begins by providing a detailed account of UK law on sustainable development by reviewing the various policy institutional and legal mechanisms used by the UK since the 1980s and by devolved administrations since devolution took effect in 1999 Progress has been slow too slow and according to the scientists time is running out To deal with this lack of progress the book advocates increasing the status of ecological sustainability and sustainable development through the introduction of a wide range of legal mechanisms which would compel the change needed The book calls for ecological sustainability or respecting the Earth's environmental limits to be afforded the status of legal principle and argues that with ecological sustainability at its normative core sustainable development could provide an effective framework for decision making and governance It argues that to support this approach and ensure consistency the time has come for sustainable development to receive explicit legal backing Over and above its symbolic and educational value legislation can impose mandatory rules on policymakers and decision makers often with meaningful consequences both inside and outside the courtroom To this end the book contributes to the theory on sustainable development governance by suggesting three possible legislative approaches for such intervention The volume concludes that while a lack of leadership on sustainable development may hinder the introduction of these innovations once introduced these innovations would equally provide much needed support for effective

leadership towards a sustainable future Andrea Ross is a Reader in the School of Law at the University of Dundee and has taught and researched in the areas of public and environmental law for over 18 years Before becoming an academic she qualified as a Barrister and Solicitor in Ontario Canada An Earthscan from Routledge book The Climate Crisis and Other Animals Richard Twine,2024-03-01 The Climate Crisis and Other Animals is a must read for anyone who cares about the future of our planet and the animals who live on it Twine examines the impact of the climate crisis on nonhuman animals and argues for the importance of a climate and food justice movement inclusive of nonhuman animals The book examines the ways in which climate breakdown is affecting nonhuman animal species and delves deeply into the politicised controversy over the extent of emissions from animal agriculture demonstrating the markedly lower emissions of eating vegan Critical of misguided human centred framings of the climate crisis Twine makes clear the necessity of including practices of animal commodification the importance of documenting the effect of a changing climate on other animal species and the mitigative opportunities of a radical remaking of dominant human animal relations The Climate Crisis and Other Animals addresses the emissions impacts of radical land use changes and the twentieth century scaling up of animal commodification within the animal industrial complex revealing how this system is interwoven in the gendered and racialised histories of capitalism Twine collates an impressive body of scientific research that demonstrate both the already enormous impact of the climate crisis on the lives of nonhuman animals and the need to tackle the dominance of meat based cultures Twine critically explores approaches to food transition and three potentially transformative scenarios for global food systems that could help dismantle the animal industrial complex and create a more sustainable and just food system Averting the climate and biodiversity crises requires nothing less than a radical transformation in how we see ourselves in relation to other species

Climate Change as Environmental and Economic Hazard Boris Porfiriev,2009-12 The current policy for climate change prioritises mitigation over adaptation The collected papers of Climate Change as Environmental and Economic Hazard argue that although efforts to reduce greenhouse gas emissions are still vital the new policy paradigm should shift the priority to adaptation with a special focus on disaster risk reduction It should also consider climate change not purely as a hazard and a challenge but as a window of opportunity to shift to a new sustainable development policy model which stresses the particular importance of communities resilience The papers in this volume explore the key issues linked to this shift including Increasing research into the Earth Sciences climate reconstruction and forecasting in order to decrease the degree of uncertainty about the origin development and implications of climate change The introduction of more binding and comprehensive regulation of both greenhouse gas emissions and adaptation measures like that in the United Kingdom Matching climate policy with that for disasters and mainstreaming it into overall development strategies The volume is a valuable addition to previous climate change research and considers a new policy approach to this new global challenge

Challenges to Emerging and Established Powers Marco Vieira,Jonathan Grix,2017-10-02 This edited volume explores the

analytical possibilities of contrasting Brazil and the United Kingdom as examples of emerging and established powers respectively. It is organised around several themes focusing on the roles of Brazil and the United Kingdom in the management of global economic governance, international development, international security, the politics of regional integration, global climate change governance, and the political leveraging of sports mega events. Each chapter explores Brazil's and/or the UK's particular foreign policies and their resulting impact on these key areas of global governance and politics. The conceptual focus is on these states' motivations as either status seekers (Brazil) or status maintainers (UK) in the context of a fast-moving international landscape. The chapters in this book directly or indirectly indicate that these states wish to draw attention to their aspiring or established positions as key global players through either visible foreign policy action and/or symbolic rhetoric. This book was originally published as a special issue of *Global Society*.

Fracking The UK 2 Alan Tootill, 2016-12-12

Alan Tootill's first volume of *Fracking The UK* discussed the threat to Britain of a new dash for gas. It concluded that the US experience shows the UK government's imposition of shale gas exploration on an unwilling public is ill-judged and unacceptable. Published in March 2013, this remains an essential primer to fracking and how it might affect the UK. In this new volume, Alan Tootill covers the events in the UK since 2013 and, with the struggle against fracking winning the political argument in Scotland, Wales, and Northern Ireland, concentrates on the English dimension to the continuing war against an unwanted industrialisation of our countryside and unwarranted attack on environmental and human health, human rights, and local democracy.
