The What and How of Modelling Information and Knowledge C. Maria Keet,2023-11-17 The main aim of this book is to introduce a group of models and modelling of information and knowledge comprehensibly Such models and the processes for how to create them help to improve the skills to analyse and structure thoughts and ideas to become more precise to gain a deeper understanding of the matter being modelled and to assist with specific tasks where modelling helps such as reading comprehension and

summarisation of text The book draws ideas and transferrable approaches from the plethora of types of models and the methods techniques tools procedures and methodologies to create them in computer science This book covers five principal declarative modelling approaches to model information and knowledge for different yet related purposes It starts with entry level mind mapping to proceed to biological models and diagrams onward to conceptual data models in software development and from there to ontologies in artificial intelligence and all the way to ontology in philosophy Each successive chapter about a type of model solves limitations of the preceding one and turns up the analytical skills a notch These what and how for each type of model is followed by an integrative chapter that ties them together comparing their strengths and key characteristics ethics in modelling and how to design a modelling language In so doing we ll address key questions such as what type of models are there How do you build one What can you do with a model Which type of model is best for what purpose Why do all that modelling The intended audience for this book is professionals students and academics in disciplines where systematic information modelling and knowledge representation is much less common than in computing such as in commerce biology law and humanities And if a computer science student or a software developer needs a quick refresher on conceptual data models or a short solid overview of ontologies then this book will serve them well
