Networks Daniel Hardy, Guy Malleus, Jean-Noel Mereur, 2013-12-18 Revolution transformation upheaval and promise Yesterday the technologies of communication were accessible only to experts today they are a subject of constant discussion in the media New services are

advertised on a daily basis and the potential realized or not of these technologies is a constant source of comment and discussion. But beyond the media frenzy, things really are developing with increasing speed driven by the power of the Internet. The network has built up an ongoing relationship between research centres, development teams and marketing teams, allowing a constructive collaboration between technologies. The network has become the catalyst for its own evolution. The arrival of IP and GSM has given rise to new corporate giants like Cisco Systems and Nokia. Operators, witnessing the diversification of their main sources of revenue, have been forced to merge or split. Entirely new actors from various horizons are counting on their ability to act as operators without a network to their name. Traditional equipment manufacturers have had to rethink their product lines in view of these new foundations. Likewise, governments have understood the need to create a body of laws that promote the harmonious and rapid development of networks to offer alternatives for operators and service providers. These often complex regulations act both as constraint and opportunity for operators and give direction to the actions of actors across the board.
