## **virology exam 2 actual questions and answers new year 2024 with complete solution**

What virus causes measles Ans - paramyxovirus

Does measles have a vaccine Ans - Yes

What are the 4 factors influencing virus infection Ans - Age, General health and nutrition, Genetic factors, and Immunity

What are innate defenses Ans - Innate defenses provide broad, nonspecific defense against any pathogen (is immediate and effective against any pathogen)

What is adaptive immunity Ans - Immune cells recognize and remember specific pathogens (requires days to weeks to develop and is specific for each particular virus)

What is the first line of defense that is in innate defenses Ans - Skin, mucus, ear wax, tears, stomach acid, ciliated respiratory tract cells (Other defenses include white blood cells, macrophages, dendritic cells, and natural killer cells)

What are macrophages Ans - Ingest and kill pathogens, including viruses, by phagocytosis, and present in tissues throughout the body

Activated macrophages produce \_\_\_\_\_ which trigger the hypothalamus to produce prostaglandins (induce fever, an innate antiviral response) Ans - Pyrogens

What are dendritic cells Ans - Ingest and kill pathogens, including viruses, by phagocytosis. Are present in skin, mucus membranes, GI tract (process viral antigens onto their cell surface for presentation to T helper cells)

What are natural killer cells Ans - Recognize and kill cells expressing viral or tumor antigens

Activated natural killer cells release cytokines called \_\_\_\_\_ which causes lethal pores in target cells Ans - Perforins

What is an interferon response Ans - cytokine is produced in virus infected cells (attaches to neighboring cells inducing an antiviral state) does not protect the cell that is infected, but rather protects the surrounding cells

**The Present and Future of Immunology Education** Andrea Bottaro, Deborah M. Brown, John Gregory Frelinger, 2022-01-24 The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate medical graduate and post graduate instruction Moreover developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity Furthermore the practical toolbox of

immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science future immunologists will likely need to be at least conversant in for instance computational structural and system biology nanotechnology and tissue engineering At the same time our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications As a consequence in addition to stand alone courses immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi year curriculum This necessitates inter disciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology cancer biology oncology infectious diseases pharmacology orthopedics and bioengineering Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one size fits all instruction and to tailor level and discipline appropriate content to different types of students using multiple teaching formats Finally like most other disciplines immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives comfortable with and expect on demand and multi modal learning diversified sources and active engagement Thankfully the dynamic and interactive behavior of immune system cells now visualized with striking immediacy by in vivo imaging has the ability to capture and hold the interest of even the most jaded learner The need for an increasingly immunology knowledgeable workforce not just academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field Acknowledgement We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS

**Postgraduate Students Of Oral And Maxillofacial Pathology And Oral Microbiology** Bhuvan Nagpal, 2023-04-17 This book has been designed from the perspective of a postgraduate student who is about to appear for the MDS Oral Pathology Microbiology university examination. The book encompasses important topics and questions from both theory as well as practical point of view that have been taken from various question papers of renowned Indian Universities. This book will help the students to overcome the nightmare of final minutes of preparation. I have tried to bring out a book which can invoke the interest in the subject. This book holds the potential of filling the gap that has been felt by the students. In addition, a mention of the repeated question is done using symbol markings. We hope that this book will serve the purpose for students to learn and act as a guide to read well structured text and content for their examinations from acceptable resources. I humbly accept the limitations regarding shortcomings in the book and also sincerely welcome the constructive suggestions from the readers of this book.
