Virtual Civilization In The 21st Century:

Virtual Civilization in the 21st Century Andrew Targowski, 2015 This book analyzes a new phenomenon in civilization the transformation of the current Information Wave into virtual civilization In the 21st century the real space of the world civilization due to the massive network intensive use of computers world wide gained the virtual space known as cyberspace Cyberspace is a product of information technology exemplified by the Internet as the world system of information highway s INFOSTRADA S which forms a digital space containing all sorts of files and communication exchanges practiced in online and real time modes For the first time in 6 000 years of human civilization society has become a quantum society which can be real and virtual at the same time The virtual society is invisible for those who do not use computer networks Even for those who do use them cyberspace access requires some sort of commercial transactions oriented activities ex on Amazon or eBay and others searching on Google or Yahoo or communicating as a member of one of social networks e g Facebook Twitter LinkedIn and others *The Strategies of Informing Technology in the 21st Century* Targowski, Andrew, 2021-09-18 Digital technology is ever changing which means that those working or planning to work in IT or apply IT systems must strategize how and what applications and technologies are ideal for sustainable civilization and human development Developmental trends of IT and the digitalization of enterprise agriculture healthcare education and more must be explored within the boundaries of ethics and law in order to ensure that IT does not have a harmful effect on society The Strategies of Informing Technology in the 21st Century is a critical authored reference book that develops the strategic attitude in developing and operating IT applications based on the requirements of sustainable civilization and ethical and wise applications of technology in society Technological progress is examined including trends in automation artificial intelligence and information systems The book also specifically covers applications of digital informing strategies in business healthcare agriculture education and the home Covering key concepts such as automation robotization and digital infrastructure it is ideal for IT executives CIS MIS CS faculty cyber ethics professionals technologists systems engineers IT specialists and consultants security analysts students researchers and academicians **Civilization in the 21st Century** , *Informing and Civilization* Prof. Dr. Andrew Targowski, 2016 The aim of this book is to synthesize the role of information throughout the history of civilization s development This will be defined through the convergence of a the cumulative evolution and revolution of the intellect cognition as data information concepts knowledge and wisdom b labor and c politics which seek to control the environment society and the world applying culture and infrastructure as tools Whereas researchers reveal the myriad of dimensions of the social order and its historiography this book provides a synthesis of the relations which is limited to information and its informing systems and civilization within the context of historiosophie history with judgment The method presented in this book the architectural approach to the dynamics of civilizational development is a new layer over the quantitative history based on statistical data In an architectural synthesis of civilization we seek a big picture of

civilization waves in order to develop some criteria oriented views of the world and its future predictability To understand the crises and conflicts of civilization which are driven by technology in recent centuries such a synthesis as well as optimism for human proactive adaptation survival and development must be undertaken This approach to civilizational development should allow humans to eventually reinvent the future in a continuous manner We in due course should be able to predict the rate of change and provide civilization bridging solutions based on original thinking It is important to remind ourselves that information is as old as our world about 15 billion years because plants and trees and in general non human nature produces all sorts of information for example the changing colors of plants and trees which is associated with the different seasons When the first living organisms appeared on our planet they had ability to inform as well by changing forms colors signals and so on The first signs of life on our planet came into being about 3 85 billion years ago Therefore organism based life on the Earth actually came to be over a period of just 130 million years Hominids diverged from apes some 10 6 million years ago instinct driven info communication i e behavior less controlled by cognition and the first humans bipeds with large brains who could use tools and sound driven info communication took form around 6 2 5 million years ago in Southeast Africa Homo symbolicus who could skillfully use language appeared about 60 000 years ago The origin of civilization some 6 000 years ago marks the beginning of the first advanced info communication systems applied by humans who could even record information

The History, Present State, and Future of Information Technology Andrew Targowski, 2016 In Part I Prof Targowski takes us through the evolution of modern computing and information systems While much of this material is familiar to those of us who have lived through these developments it would definitely not be familiar to our children or our students He also introduces a perspective that I found both refreshing and useful looking at the evolution on a country by country basis For those of us who live in the U S it is all too easy to imagine that evolution to be a purely local phenomenon I found my appreciation of the truly global nature of computing expanding as he walked me through each country s contributions In Parts II and III constituting nearly half of the book Targowski provides what I would describe as an in depth case study of the challenges and successes of informatics in Poland As he tells each story many of which involved him personally the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in IT Even after Poland left the orbit of the former Soviet Union the remaining vestiges of the old way of thinking remained a major impediment to progress Being right and being rigorous were far less important than being in tune with the approved ways of thinking There are important lessons to be learned here particularly as we try to project how IT will evolve in rapidly developing economies such as China But from my experience they apply equally well to western academia where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged In Part IV Targowski presents a bold forward looking synthesis of informatics and informing science in the future Building upon articles recently published in *Informing Science The International Journal of an*

Emerging Transdiscipline he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee He then considers how these trends will necessarily force us to rethink how we develop and apply IT He does not steer away from the controversial But he also provides cogent arguments for all his predictions and recommendations

Wisdom in the Context of Globalization and Civilization Henryk Krawczyk, 2019-11-26 What happens when our developed knowledge does not support human activities in politics economy culture and infrastructure today The solution lies in knowing what wisdom is and willingly applying it to most of humanity s activities transforming a chaotic civilization into a wise one A merely knowledge rich society cannot sustain its civilization without being wise and willing to learn and apply this essential human virtue in practice This book investigates the issues of human cognition with regards to current issues surrounding globalization and civilization in such a way as to define wisdom not only as an art but as a science too Its investigation emphasises the learning of wisdom at schools and colleges and stresses that its application in practice should be as commonplace as arithmetic

If Indo-Europeans survive contemporary global crisis? Bogdan Góralski, 2021-05-03 The cosmos and with it the solar system through its physical interaction shapes the fate of the inhabitants of the Earth and their civilization I have described this in my publications available on OPEN ACCESS on the Internet and in the following book I confirm it once again Physico chemical processes including climatic processes of our planet s environment are controlled by the closer and further influence of the space environment The changing physicochemical environments including climate changes of our planet influencing biological creatures to shape the evolving culture of human civilizations The defective view of the world promoted in the era of exposing the biological of the human mind contained in the statement being shapes consciousness is supplemented by And consciousness shapes being The evolution of human knowledge supported recently by information resources stored on the Internet allows us to conclude that the universe is filled with a life shaped by the cosmos and in response the evolution of biological life shapes the cosmic environment This sentence being shapes consciousness and consciousness shapes being contains my concept of the functioning of the constantly renewing cosmic environment in which the evolution of biological beings is inscribed The end of the evolution of biological beings is the creation of a virtual environment in which a new star system will be created giving life to a virtual biological environment so that energy can be reproduced The world is composed of interpenetrating and interacting parallel virtual realities that create the energy resources of the Universe In the first part of the book entitled The Solar System shapes the climate of the Earth 7 I describe how the interactions of the Solar System and the Milky Way shape the Earth s climate and the Earth s lithosphere In the second part of the book entitled The civilization results of climate change 120 I describe how climate change is shaping Earth s cultural systems as human knowledge unfolds It is necessary to return to the knowledge and beliefs of antiquity to understand the modern world and reconcile different nations Only peace and reconciliation between people are capable of ensuring the further fruitful evolution of the world In the last third part of the book entitled The Third Way between
