Handbook of Research on Computational Grid Technologies for Life Sciences, Biomedicine, and Healthcare Cannataro, Mario, 2009-05-31 This book provides methodologies and developments of grid technologies applied in different fields of life sciences Provided by publisher **Cumulated Index Medicus**, 1998 *3d virtual histology of neuronal tissue by propagation-based x-ray phase-contrast tomography* Mareike Töpperwien, 2018 Deciphering the three dimensional 3d cytoarchitecture of neuronal tissue is an important step towards understanding the connection between tissue function and structure and determining relevant changes in neurodegenerative diseases The gold standard in pathology is histology in which the tissue is examined under a light microscope after serial sectioning and subsequent staining It is an invasive and labor intensive technique which is prone to artifacts due to the slicing procedure While it provides excellent results on the 2d slices the 3d anatomy can only be determined after aligning the individual sections leading to a non isotropic resolution within the tissue X ray computed tomography CT offers a promising alternative due to its potential resolution and large penetration depth which allows for non invasive imaging of the sample s 3d density distribution In classical CT contrast formation is based on absorption of the x rays as they pass through the sample However weakly absorbing samples like soft tissue from the central nervous system give nearly no contrast By exploiting the much stronger phase shifts for contrast formation which the sample induces in a partially coherent wavefront it can be substantially increased During free space propagation behind the sample these phase shifts are converted to a measurable intensity image by interference of the disturbed wave fronts In this thesis 3d virtual histology is performed by means of propagation based x ray phase contrast tomography on tissue from the central nervous system of humans and mice A combination of synchrotron based and laboratory setups is used to visualize the 3d density distribution on varying lengths scales from the whole organ down to single cells By comparing and optimizing different preparation techniques and phase retrieval approaches even sub cellular resolution can be reached in mm sized tissue blocks The development of an automatic cell segmentation workflow provides

access to the 3d cellular distribution within the tissue enabling the quantification of the cellular arrangement and allowing for extensive statistical analysis based on several thousands to millions of cells This paves the way for biomedical studies aimed at changes in cellular distribution e g in the course of neurodegenerative diseases such as multiple sclerosis Alzheimer s disease or ischemic stroke

**Euro-Par 2000 Parallel Processing** Arndt Bode,Thomas Ludwig,Wolfgang Karl,Roland Wismüller,2003-06-26 Euro Par the European Conference on Parallel Computing is an international conference series dedicated to the promotion and advancement of all aspects of parallel computing The major themes can be divided into the broad categories of hardware software algorithms and applications for parallel computing The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline extending the frontier of both the state of the art and the state of the practice This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up The main audience for and participants of Euro Par are seen as researchers in academic departments government laboratories and industrial organisations Euro Par s objective is to become the primary choice of such professionals for the presentation of new results in their specific areas Euro Par is also interested in applications that demonstrate the effectiveness of the main Euro Par themes Euro Par now has its own Internet domain with a permanent Web site where the history of the conference series is described <http://www.euro-par.org> The Euro Par conference series is sponsored by the Association of Computer Machinery and the International Federation of Information Processing *IEEE Virtual Reality Annual International Symposium* ,1996
