Colucci,1994 Assessment of the performance of the National Meteorological Center's NMC new Eta numerical weather prediction model requires objective evaluation through direct comparison of model forecast output to its own analysis and to the analysis of other numerical models The ultimate goal of the Eta Model is to provide accurate mesoscale weather forecasts through the late 1990's which are superior to those currently provided by the older NGM To accurately evaluate the Eta Model several model forecast output fields were compared to the NGM for a common population of extratropical cyclones over a period of five months The separate model forecasts were also evaluated against their own analysis Selected fields included central sea level pressure 12h central pressure change 1000 500 mb thickness at the cyclone center and both convective and total precipitation at the cyclone center Results indicated a consistent negative bias in forecast central pressure values for the NGM and a positive bias for the Eta Model Mean forecast position errors were nearly identical for both models through 36h with the Eta forecast position errors only slightly larger at 48h Both models exhibited a slight cold bias in 1000 500 mb thickness fields at the cyclone centers with the NGM being greater The Eta Model tended to forecast more precipitation in general and in particular the precipitation was higher for stable precipitation **Manual of Forensic Odontology** Andzej Huczynski,2017-11-15 The most exhaustive book on forensic dentistry the fourth edition of this volume covers the latest advances in the field including regulations affecting forensic dental practice and procedures in light of the Health Insurance Portability and Accessibility Act updated ABFO guidelines and new digital radiographic and photographic developments Th **Retinal Optical Coherence Tomography Image Analysis** Xinjian Chen,Fei Shi,Haoyu Chen,2019-07-05 This book introduces the latest optical coherence tomography OCT imaging and computerized automatic image analysis techniques and their applications in the diagnosis and treatment of retinal diseases Discussing the basic principles and the clinical applications of OCT imaging OCT image preprocessing as well as the automatic detection and quantitative analysis of retinal anatomy and pathology it includes

Modularity in Motor Control: From Muscle Synergies to Cognitive Action

Representation Andrea d'Avella,Martin Giese,Yuri P Ivanenko,Thomas Schack,Tamar Flash,2016-04-21 Mastering a rich repertoire of motor behaviors as humans and other animals do is a surprising and still poorly understood outcome of evolution development and learning Many degrees of freedom non linear dynamics and sensory delays provide formidable challenges for controlling even simple actions Modularity as a functional element both structural and computational of a control architecture might be the key organizational principle that the central nervous system employs for achieving versatility and adaptability in motor control Recent investigations of muscle synergies motor primitives compositionality basic action concepts and related work in machine learning have contributed to advance at different levels our understanding of the modular architecture underlying rich motor behaviors However the existence and nature of the modules in the control architecture is far from settled For instance regularity and low dimensionality in the motor output are often taken as an indication of modularity but could they simply be a byproduct of optimization and task constraints Moreover what are the relationships between modules at different levels such as muscle synergies kinematic invariants and basic action concepts One important reason for the new interest in understanding modularity in motor control from different viewpoints is the impressive development in cognitive robotics In comparison to animals and humans the motor skills of today s best robots are limited and inflexible However robot technology is maturing to the point at which it can start approximating a reasonable spectrum of isolated perceptual cognitive and motor capabilities These advances allow researchers to explore how these motor sensory and cognitive functions might be integrated into meaningful architectures and to test their functional limits Such systems provide a new test bed to explore different concepts of modularity and to address the interaction between motor and cognitive processes experimentally Thus the goal of this Research Topic is to review compare and debate theoretical and experimental investigations of the modular organization of the motor control system at different levels By bringing together researchers seeking to understand the building blocks for coordinating many muscles for planning endpoint and joint trajectories and for representing motor and behavioral actions in memory we aim at promoting new interactions between often disconnected research areas and approaches and at providing a broad perspective on the idea of modularity in motor control We welcome original research methodological theoretical review and perspective contributions from behavioral system and computational motor neuroscience research cognitive psychology and cognitive robotics
