

# Basics of Film Lighting: An Essential Guide

## 1. Key Light

### Key Points:

- Avoid placing your key light close to the camera. It will cause your lighting to become flat and featureless.
- If a key light is positioned to the side or back of an actor, it will create a mysterious/dramatic mood, and overall keep the image dark.
- A key light is the primary light in a three-point lighting setup.

## 2. Fill Light

When using a key light, you'll notice it casts shadows. Fill lighting is used to remove those shadows. Fill lights are almost always used on the opposite side of the key light to balance everything out, and they're usually not as powerful.

Fill lights are one of the most foundational lighting methods to understand. You'll need a good understanding of shaping light to be able to control the contrast, shadows, and brightness of the shot.

## 3. Back Light

A back light does just what it says – it lights the back. Back lights hit the subject from behind and slightly above. If you have a dark background, you'll want to use a back light to pull the actor or subject from the background. There are times actors will look flat and two-dimensional and adding a back light will give the subject depth.
