ITSM – Service Order Configuration Guide

Added by Mariana Seblikova, last edited by Stefan Doktor on Jan 28, 2014

1.   General Information

This guide describes how to configure the Service Order scenario for ITSM in SAP Solution Manager 7.1.

1.1   Service Order Overview

The application Incident Management (IM) is a central service point which enables a centralized incident and issue message processing in multiple organization levels. It offers a communication channel with all relevant stakeholders of an incident, such as business user, SAP Service & Support and Partner Support employees.

IM is integrated in all Application Lifecycle Management processes of SAP Solution Manager, in any SAP Business Suite solution and could be connected to a nonSAP Help Desk application. Furthermore, it includes follow-up activities like Change Management and Root Cause Analysis.
