Human-Centered Software Engineering - Integrating Usability in the Software Development Lifecycle Ahmed Seffah,Jan Gulliksen,Michel C. Desmarais,2005-12-08 Human CenteredSoftwareEngineering BridgingHCI UsabilityandSoftwareEngineering From its beginning in the 1980 s the eld of human computer interaction HCI has beende nedasamultidisciplinaryarena BythisImeanthattherehas beenanexplicit recognition that distinct skills and perspectives are required to make the whole effort of designing usable computer systems work well Thus people with backgrounds in Computer Science CS and Software Engineering SE joined with people with ba grounds in various behavioral science disciplines e g cognitive and social psych ogy anthropology inaneffortwhereallperspectiveswereseenasesentialtocreating usable systems But while the eld of HCI brings individuals with many background disciplines together to discuss a common goal the development of useful usable satisfying systems the form of the collaboration remains unclear Are we striving to coordinate the varied activities in system development or are we seeking a richer collaborative framework In coordination Usability and SE skills can remain quite distinct and while the activities of each group might be critical to the success of a project we need only insure that critical results are provided at appropriate points in the development cycle Communication

by one group to the other during an activity might be seen as only minimally necessary In collaboration there is a sense that each group can learn something about its own methods and processes through a close partnership with the other

Communication during the process of gathering information from target users of a system by usability professionals would not be seen as so thing that gets in the way of the essential work of software engineering professionals **Computerworld**
