Chappell, Robert W. Schunk, Peter M. Banks, Richard M. Thorne, James L. Burch, 2016-10-31 Over a half century of exploration of the Earth's space environment it has become evident that the interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields Interestingly it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014 this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere ionosphere coupling conference at Yosemite in 1974 and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities Topics covered in this volume include Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysicists and planetary scientists with a cross disciplinary approach involving advanced measurement and modeling

Incoming Asteroid! Duncan Lunan, 2013-10-17 Incoming Asteroid is based on a project within ASTRA the Association in Scotland to Research into Astronautics to provide scientific answers to the question what would we do if we knew there was going to be an asteroid impact in ten years time or less Clearly there are many things humanity can do nothing about for example an unseen object traveling towards us so fast that we have no time to prepare or an object so large it may be unstoppable A realistic hazard model was decided upon and the scenario developed from that an incoming object about 1 kilometer in diameter in an orbit ranging from the outer rim of the Asteroid Belt to within that of Earth's Three basic possibilities are considered in this book The first is the deflection of the asteroid using remote probes along with a number of possible technologies to change the asteroid's course Second is the attempt of a manned mission in order to plant a propulsion system on the asteroid to push it into a different orbit Third is the nuclear option a last ditch attempt to break up and then disperse the asteroid using nuclear weapons A rather impractical combination of these second and third options were used as the plot of the popular 1998 Bruce Willis feature film Armageddon Although the cost of developing the technology needed to protect the Earth would be substantial there would certainly be spin off benefits These could eventually result in practical small scale atomic energy sources new propulsion systems that could make extraterrestrial mining within the solar system a possibility and other as yet unforeseen benefits And finally Incoming Asteroid considers the political implications how governments across the world should best react to the threat with a view to minimizing loss of life and in the weeks running up to the possible impact preventing panic in the population **A Selected Listing of NASA Scientific and Technical Reports for ...** United States.
