Highest brightness in its class at 6,000 lumens [PLC-XM150/XM150L] - Class-leading brightness ensures bright, beautiful big-screen projection

Combining a newly developed optical engine with superior cooling technology made it possible to boost the brightness to the highest level in its class at 6,000 lumens. Light efficiency that is approximately 20% higher than our previous model enables brighter, more beautiful big-screen projection, ideal for use in large conference rooms, lecture halls, or applications that require projection in well-lit areas, such as digital signage.

New optical engine with an Inorganic Liquid Crystal panel and Active Maintenance Filter (AMF) system - Higher reliability, lower maintenance costs

The highly durable new optical engine uses an inorganic liquid crystal panel. The effects of heat on optical parts are minimized by using cooling technologies designed for professional models. The Active Maintenance Filter (AMF) system allows filter cartridges to be replaced at intervals of approximately 10,000 hours. Each cartridge contains a filter mat that is equivalent to 10 filters, so the replacement frequency is reduced to one-tenth, helping reduce by and lowering maintenance costs.

Power Vertical/Horizontal Lens Shifting and other functions make it ideal for professional use

The Power Vertical/Horizontal Lens Shifting and Power Zoom/Focus functions enable projection to be adjusted without changing the projector position. Other functions ideal for professional use include Corner Key Stone Correction and a Mechanical Shutter. In addition to the standard specification lens, five more lens options, including both short- and long-focus types, are available. This makes it possible to match the lens to the installation site, so the projector can be used in a variety of places, such as medium- to large-size conference rooms, classrooms, and lecture halls.
