**Energy and Seismic Renovation Strategies for Sustainable Cities** Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and or ineffectiveness of conventional retrofit solutions financial e g high renovation costs insufficient incentives subsidies organizational e g

occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources

**The School of Mathematics at Rome's University Campus** Simona Salvo,2022-09-28 The School of Mathematics is a masterpiece of the early 1930s by Gio Ponti who is today regarded as a master of Italian Modernism Although World War II bombings shattered the coloured stained glass window that once adorned the balanced and harmonious white travertine facade the building remains a striking and significant piece of architecture Although it underwent a series of transformations over the years before its historical and artistic relevance was recognised it can still be appreciated and admired for its magnificent expressivity Its uniqueness derives from its complexity such as is often found in Italian monuments of all ages a rare synthesis of urban design architecture art industrial design historical archives and perhaps the first of its kind scientific production in the field of mathematics This illustrated report is a synopsis of the extensive technical research documents produced by the research team for each step of the work It is also a premise for the conservation management plan proposed at the end of the full report As in any area of science knowledge is at the basis of future action we need to understand today how to take care of the historical buildings of our campus tomorrow buildings recognised worldwide as architectural and historical monuments
