Enterprise Resource Planning and Supply Chain Management Karl E. Kurbel, 2013-08-23 This book is about running modern industrial enterprises with the help of information systems Enterprise resource planning ERP is the core of business information processing An ERP system is the backbone of most companies information systems landscape All major business processes are handled with the help of this system Supply chain management SCM looks beyond the individual company taking into account that enterprises are increasingly concentrating on their core competencies leaving other activities to suppliers With the growing dependency on the partners effective supply

chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market: SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out in the real world.

Supply Chain Management and Advanced Planning Hartmut Stadtler, Christoph Kilger, 2005-12-06

To sum up, there should be a copy on the bookshelf of all engineers responsible for detailed planning of the Product Delivery Process (PDP). The Editors highlight the impressive gains reported by companies exploiting the potential of coordinating organizational units and integrating information flows and planning efforts along a supply chain. This publication is strong on coordination and planning. It is therefore

recommended as an up-to-date source book for these particular aspects of SCM. International Journal of Production Research 2001 Vol 39 13

Service Parts Planning with SAP SCMTM Jörg Thomas Dickersbach, Michael F. Passon, 2015-04-21

This book focusses on the after-sales business and presents the Service Parts Planning (SPP) solution which was developed by SAP in a joint effort with Caterpillar and Ford in order to address the specific planning problems of service parts. The book explains the processes, structures and functions of this solution and is targeted at decision makers, project members and project managers who are involved in an implementation of SAP Service Parts Planning or for users who want to gain a better understanding of the state of art in spare parts planning and the SAP Service Parts Planning software.

Improving supply chain performance through an integrated planning concept Hermann Kraxenberger, 2007-12-19

Inhaltsangabe

Problem statement In recent years enterprises are facing a dramatic change in the way that they do business. Rapid advances in technology and increasing regulatory freedom have changed the rules and nature of competition. Enterprises are now competing globally and traditional barriers between industries are breaking down. To cope with these changes and achieve superior performance, business leaders are moving towards new business paradigms that allow their companies to work more closely with their traditional and new business partners to adapt to the rapidly changing marketplace. This improved integration is the very essence of Supply Chain Management. Supply chain leaders are reconsidering the linkages not only between functions within their own company but with organizations up and down the supply chain. Supply chain networks are becoming more efficient and more responsive to the need of increasingly demanding customers driven by competitive

pressures and supported by developments in information technology. Hereby integrated supply chain planning approaches play a major role in efficiently matching demand of the market place with supply capabilities of inter organisational networks. Driven by major success stories of supply chain performance improvements almost every company is nowadays considering the integration of its supply chain entities to yield better business performance. Two of these shining examples are Hewlett Packard that saved 25% of their distribution costs by optimizing inventories and transports as well as IBM Personal Computers that achieved a cash flow release of 750 Mio US by reengineering planning processes for direct materials and finished products. These impressive gains show the potential of coordinating organizational entities and integrating information flows and planning efforts along a supply chain. Which company can afford not to present such substantial gains in improving competitiveness? However this picture may be shattered by looking behind the shining curtain of well marketed supply chain management concepts to the real state in industry. According to a research study of Mc Kinsey Company only 32% of multinational companies running major supply chain projects claim that their performance has significantly increased. Furthermore Gartner Group states that more than 70% of all advanced planning system implementations supporting the supply chain management concept have an extensive cost.
