Ning He: SAP BPC 10 Transport Guide

Many partner friends and customers consult about the efficient and correct way to perform BPC 10 transport recently. As in BPC 10 the transport mechanismhas been significantly fine-tuned compared with previous versions with a lot of behavioral changes, I drafted this transport guide to help partners or customers to facilitate BPC transport process. The version I am demonstrating is BPC 10 SP9 Patch 1. CLM part is not covered. Any comments or suggestions are very welcome.

Prerequisites Check:

The following prerequisite checks are highly recommended before transport, especially for the first transport:

> Ensure "Automatic Recording of Changes" has been set in source system otherwise the transport request generation dialog won't pomp up when you package your selected transport objects. You need to perform the following:
> 1. a. Transaction SCC4 in source system, select the client where BW is installed and click Display.
> 2. b. Set the option Changes and Transports for Client-Specific Objects to Automatic Recording of Changes
> 3. c. After the change is applied and saved, reopen RSA1 and attempt to collect the objects and create the transport request again.

1. The BPC version and patch level in source system and in target system need to be equal.
2. Make sure the Planning and Consolidation installation guide is followed to configure the transport RFC destination. Check transaction RSTPRFC that the right user has been assigned to handle the post-processing of the import. You can refer note 1817817 if you want to know more details about BPC RFC connections.
3. Run report UJA_DATA_CHECKER and enter Environment name to check if the environments in source and in target (if exist) are consistent to avoid unnecessary transport issues.
4. It is NOT best practice to assign task profiles or data access profiles directly to users from design aspect. Furthermore, if you do so you may receive error during transport with error message "Member XXX does not exist in dimension YYY".

Transport Process:

Source System

1. Make source Environments to be transported have been set offline
2. Enter RSA1 --> Transport Connection --> Object Types --> More Types --> Environment --> Double click "Selection"
